# References

## Operating Procedures

- No. 8 – [Operating Reserve and Regulation](#)
- No. 23 – [Generator Resource Auditing](#)

## Manuals

- M-MVDR – [Measurement and Verification of Demand Reduction Value from Demand Resources](#)
- M-RPA – [Registration and Performance Auditing](#)

## Tariff

- III.1.5.1 – [Claimed Capability Audits](#)
- III.1.7.12 – Seasonal DR Audit Value of an Active Demand Capacity Resource\*

\* Will be in the revised Tariff

# Purpose of This Training

Prepare active demand resources for the new or changing audit requirements that will go into effect with price-responsive demand (PRD) on June 1, 2018

# Topics

## Seasonal DR audits for active demand response resources (DRR)

- Auditing rules and requirements
- DR Auditing and Testing Tool (ATT)
- Live software demo

## Claim 10/30 DR audits for active DRR

## Reserves

# Claimed Capability Auditing (CCA) for Demand Response

*Jim Nichols*

# Information About Audits in the Tariff

## *Specific Locations*

**PRD rules go into effect on June 1, 2018**

### Market Rule 1

- III.1.5.1 – Claimed Capability Audits
  - III.1.5.1.1 – General Audit Requirements
  - III.1.5.1.3.1 – Seasonal DR Audits
  - III.1.5.1.4 – ISO Initiated Claimed Capability Audits
- III.1.7.12 – Seasonal DR Audit Value of an Active Demand Capacity Resource

# Claimed Capability Auditing for DR

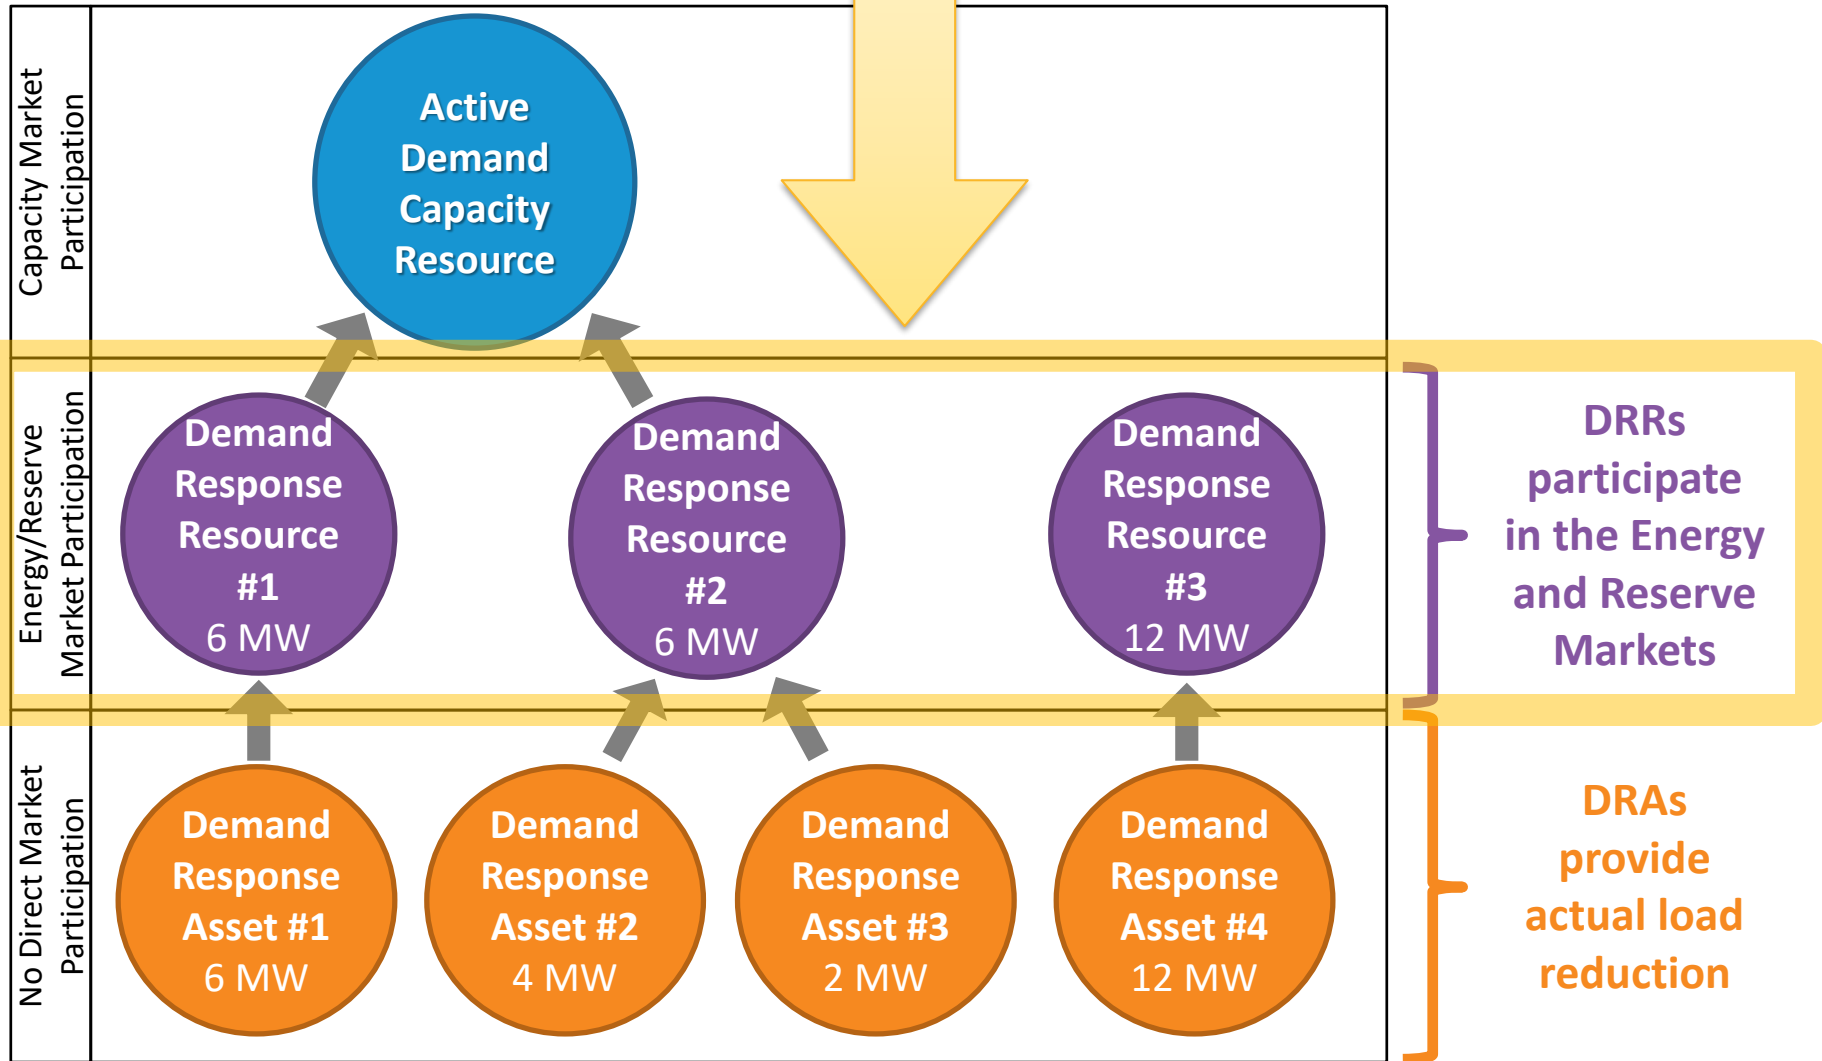

## *Main Topics*

### Auditing rules and requirements

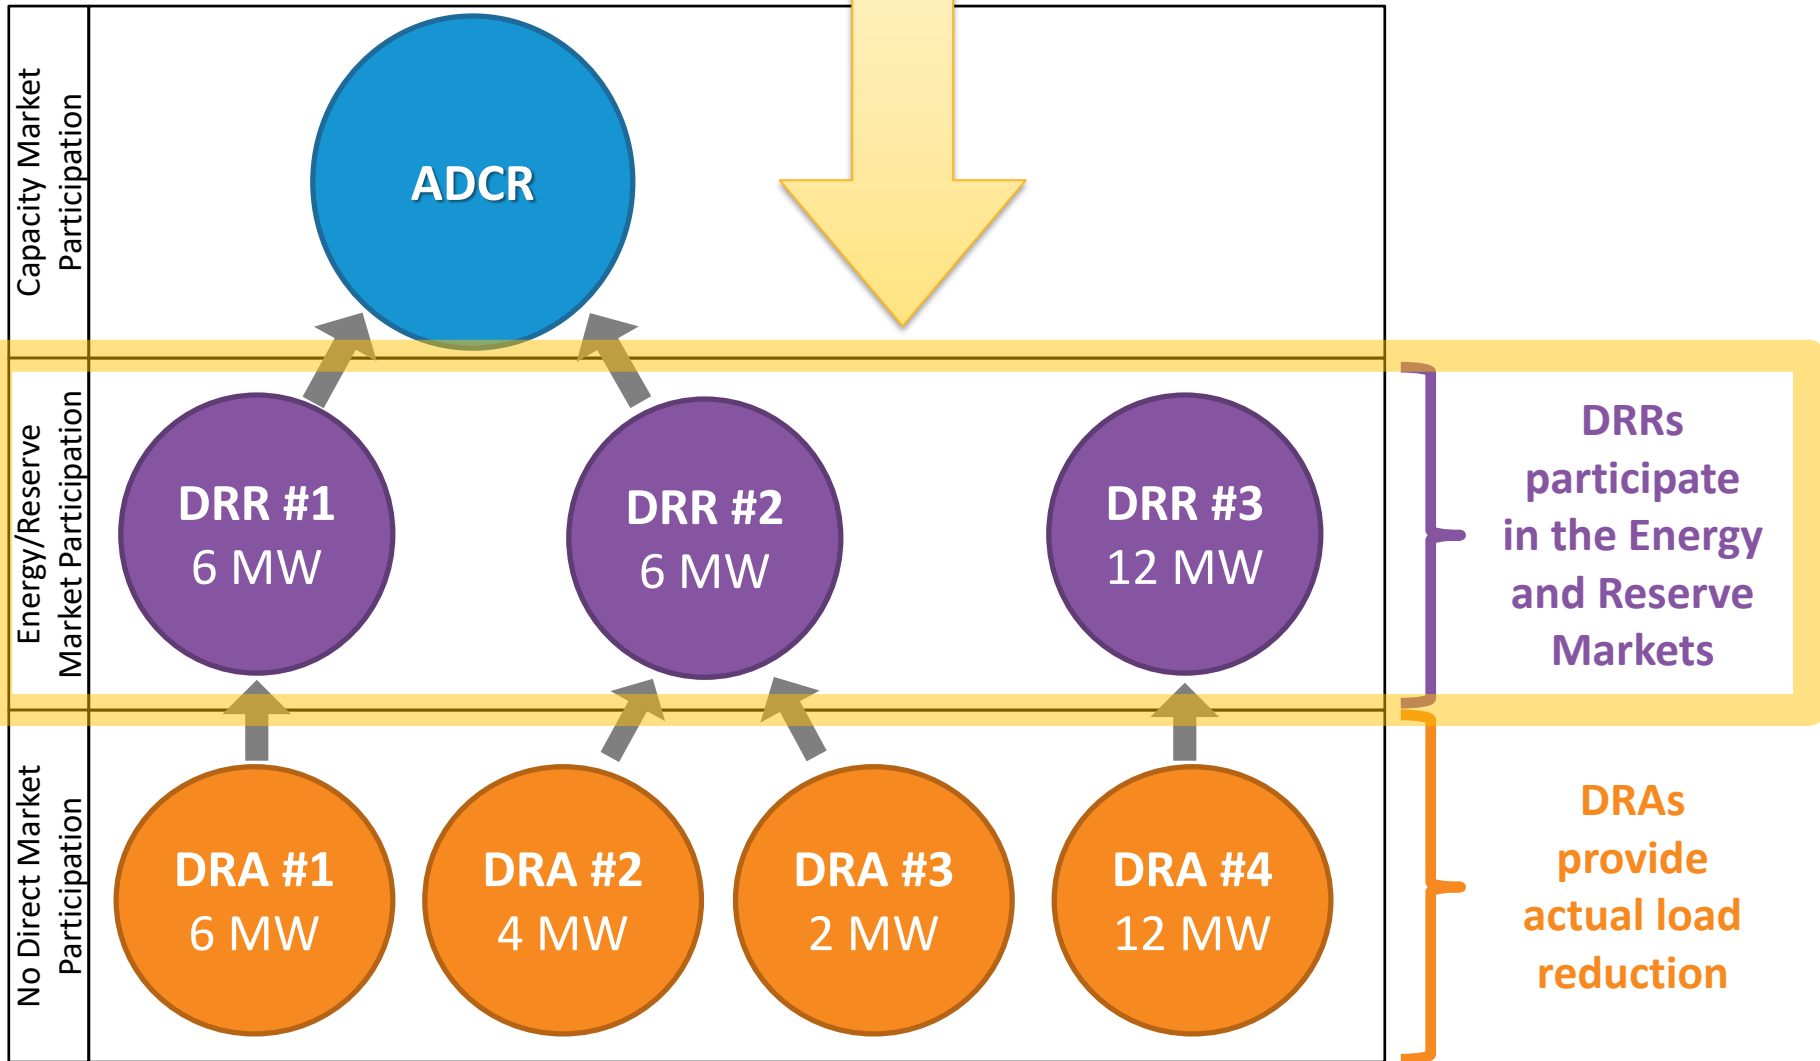

### Auditing and Testing Tool (ATT)

- Including live demo

# Claimed Capability Audits Are Performed by DRRs

# Claimed Capability Audits Are Performed by DRRs

# Types of CCAs

## Seasonal DR audit

- Customer initiated
  - Request to be dispatched for an audit
  - Use a past dispatch

## ISO-initiated audit

- A seasonal DR audit that is initiated by the ISO

# Seasonal DR Audits

# Audit Seasons

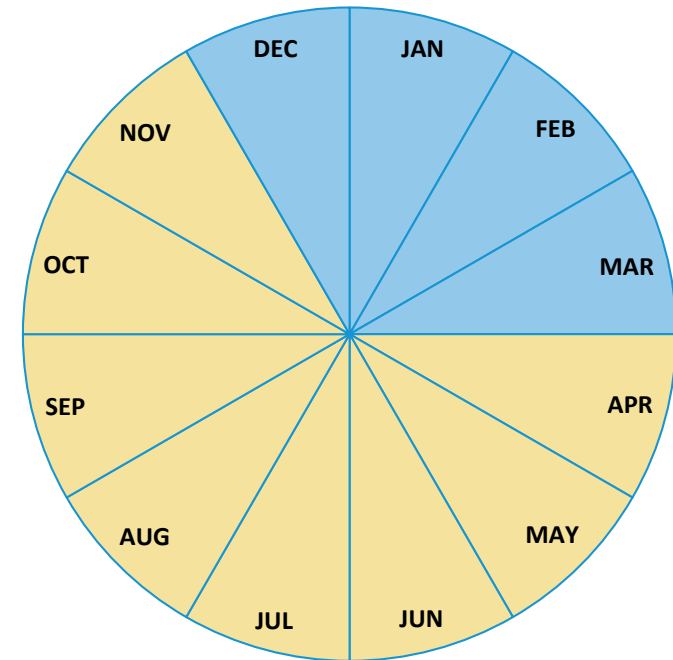

Seasonal DR audits determine the ability of a DRR to perform during specified months for a specified duration

Summer seasonal DR audit must be conducted:

- At least once every capability demonstration year
- During the months of April through November

Winter seasonal DR audit must be conducted:

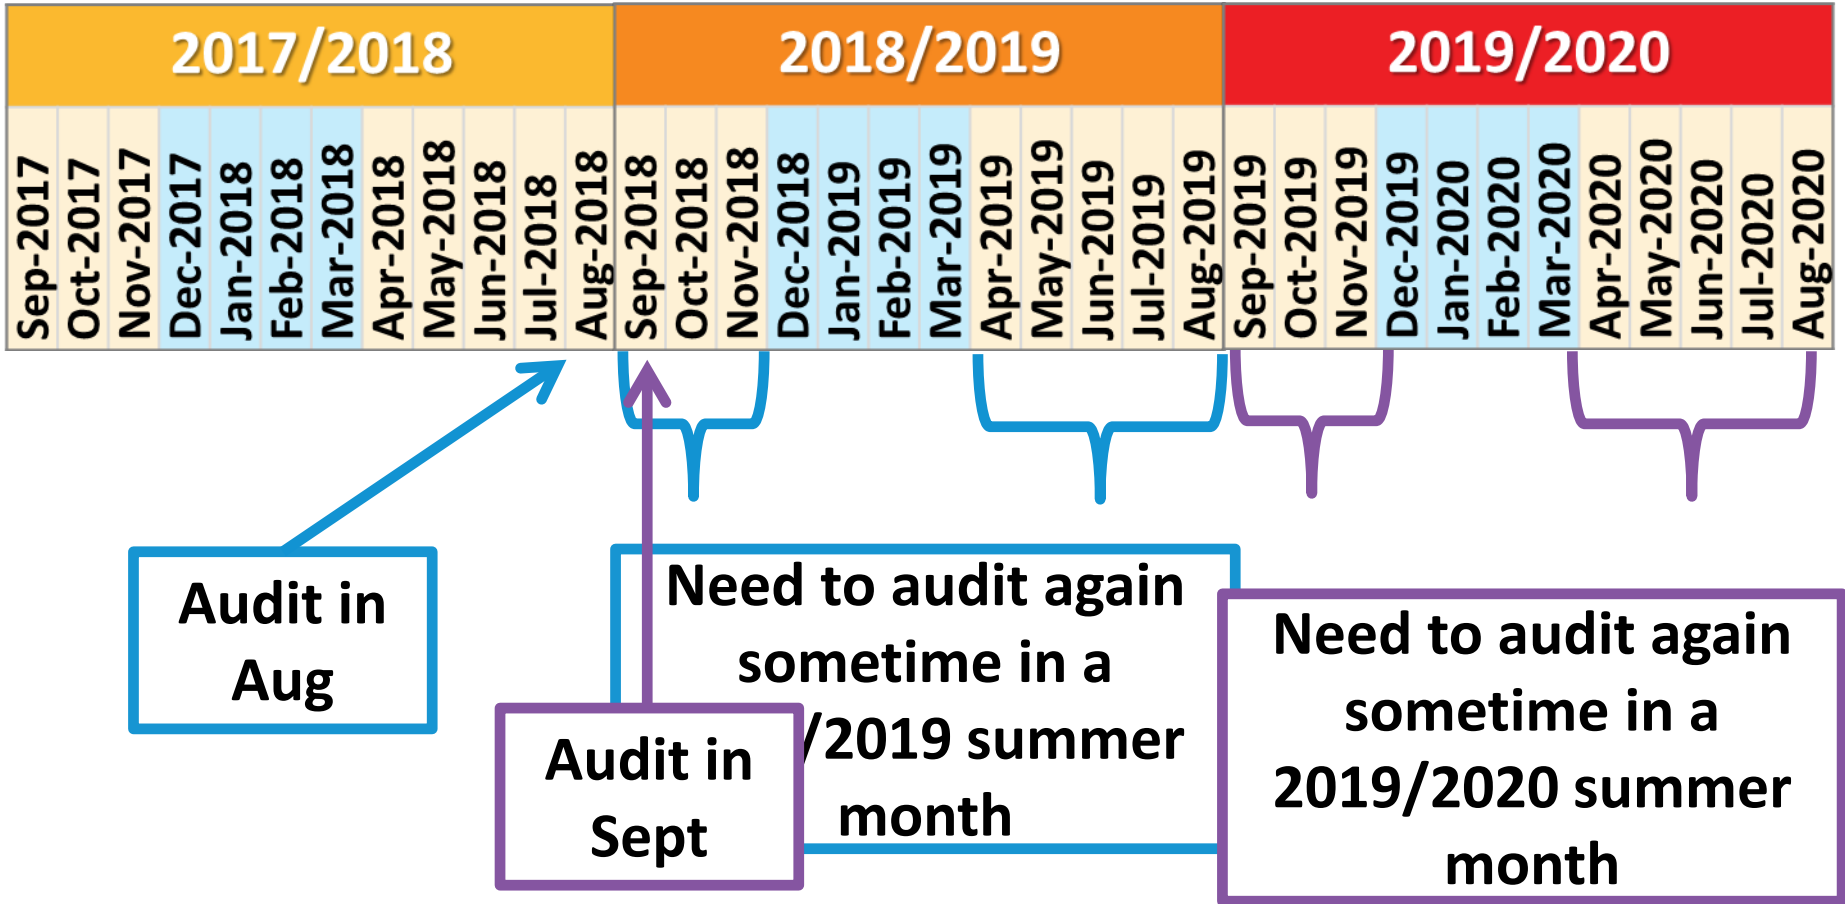

- At least once every capability demonstration year
- During the months of December through March

**You can submit multiple audits for a DRR**

# Capability Demonstration Year

September 1 through August 31

# Audit Time Requirement

Performed for 12 contiguous 5-minute intervals

12 contiguous 5-min intervals

# Submitting an Audit: 2 Options

A red oval with a white border and a slight drop shadow, containing the text "Request Audit Dispatch".

**Request Audit  
Dispatch**

A blue oval with a white border and a slight drop shadow, containing the text "Use Past Dispatch".

**Use Past  
Dispatch**

# Option: Request Audit Dispatch

Request  
Audit  
Dispatch

- You enter your request via ATT
- ISO will dispatch between 0800 and 2200
  - Non-NERC holiday weekday
  - Within 5 business days following the request
  - Specific date and time unannounced
- Dispatch instruction will contain an audit flag and will order DRR to its offered max reduction
  - Audit start will be the first 5-minute interval after sufficient time has been allowed for your resource to ramp
    - Based on its demand reduction offer parameters in eMarket
  - You don't qualify for Net Commitment-Period Compensation (NCPC) if you request a dispatch for an audit

# Cancelling an Audit – 2 Steps

Request  
Audit  
Dispatch

Lead market participant may cancel an audit request

*prior to issuance of the audit dispatch instruction*

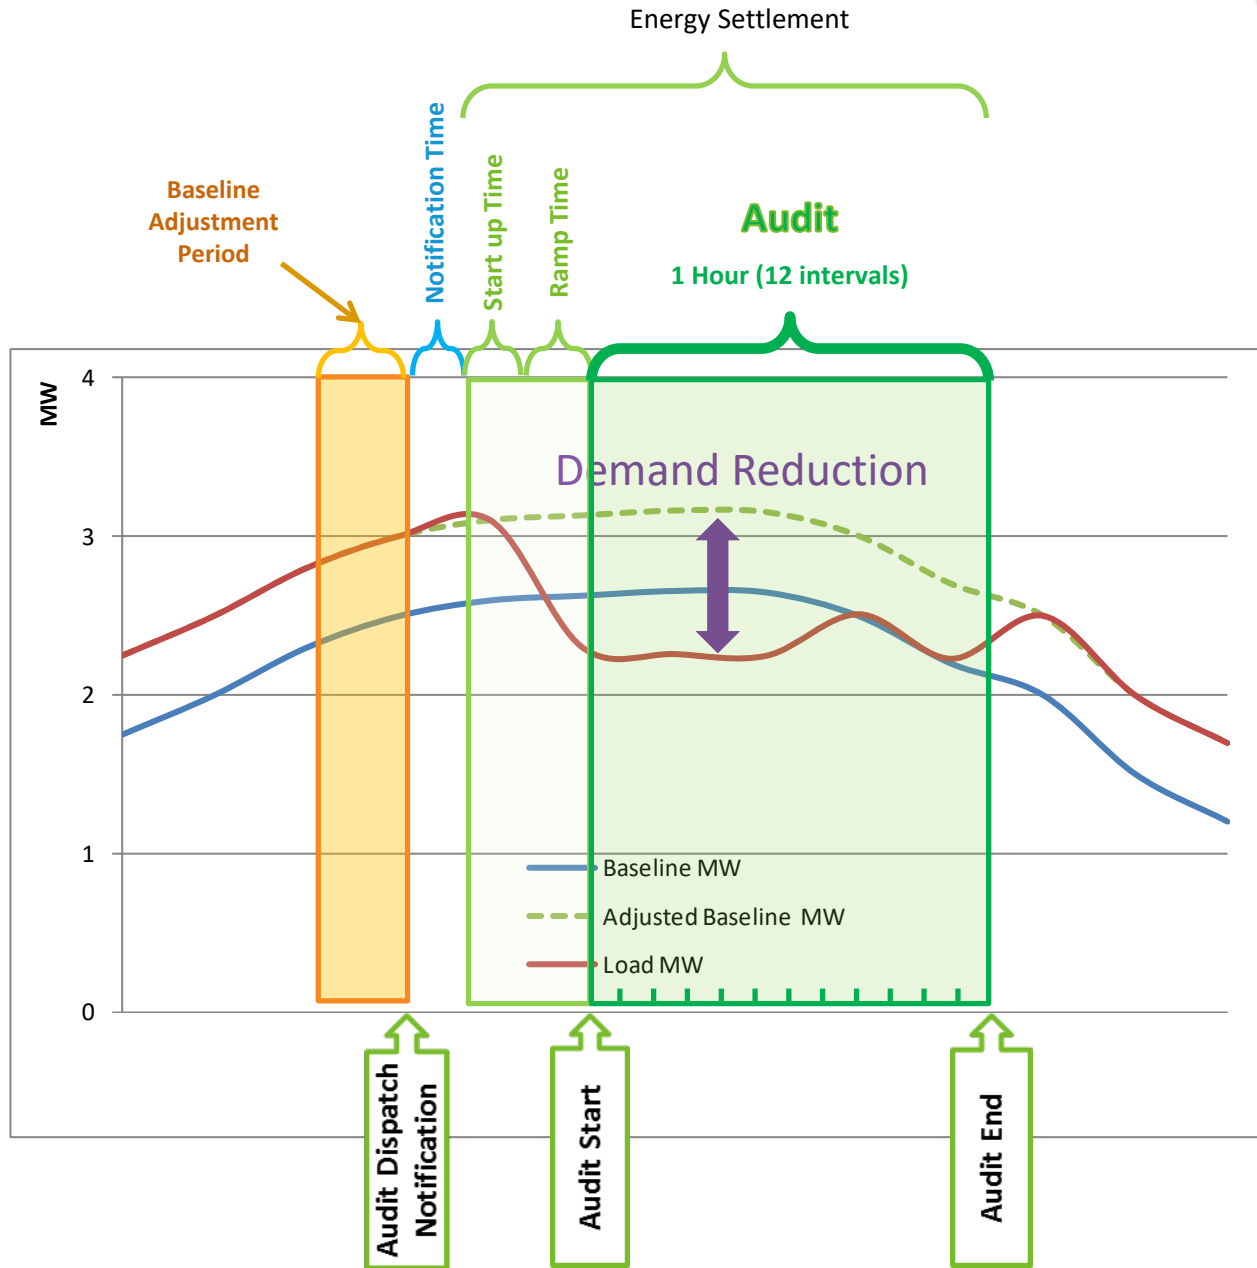

Perform *both* of these actions to ensure DRR is not dispatched:

1. Demand-designated entity (DDE) call ISO control room
2. Cancel audit request in ATT (person with lead market participant access)

# Audit Period for ISO Dispatch - Fixed

Request  
Audit  
Dispatch

# Option: Use a Past Dispatch

Use Past  
Dispatch

- Can choose 12 contiguous 5-minute intervals during a past dispatch
  - Starting with any 5-minute interval after the completion of notification time
  - Performance information can be accessed via demand response market user interface (DRMUI)
- Lead market participant must notify the ISO
  - Via ATT
  - By 5:00 p.m. on the fifth business day following the dispatch
  - Enter the date and start time
- Request cannot be cancelled
  - If submission has less than 12 valid 5-min intervals → cancelled

# Audit Period for a Past Dispatch – You Choose

Use Past Dispatch

# Seasonal Audit Value of a DRR

**Sum of the average demand reductions demonstrated during the audit by each of the DRAs associated with it**

- A DRA must be operational to contribute to the audit
- Any DRA on a forced or scheduled curtailment is assessed a zero contribution

**Results effective one day following processing of the audit results by the ISO**

# Effect of DRA *Not* Performing an Audit

*As Part of a DRR During a Demonstration Year*

**Its audit contribution for the missed season will be set to zero at end of demonstration year**

# Effect of Adding or Removing DRAs from a DRR

DRR's seasonal DR audit value is updated to match new configuration

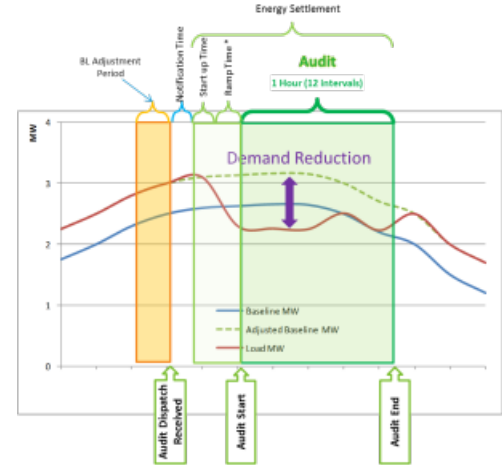

# ISO-Initiated CCA

# ISO-Initiated CCA

- ISO may call on a DRR to perform at any time
- Audit is unannounced
- Results replace either summer or winter seasonal DR audit value
- Fulfills the seasonal DR audit obligation of a DRR

# How an ISO-Initiated Audit Works

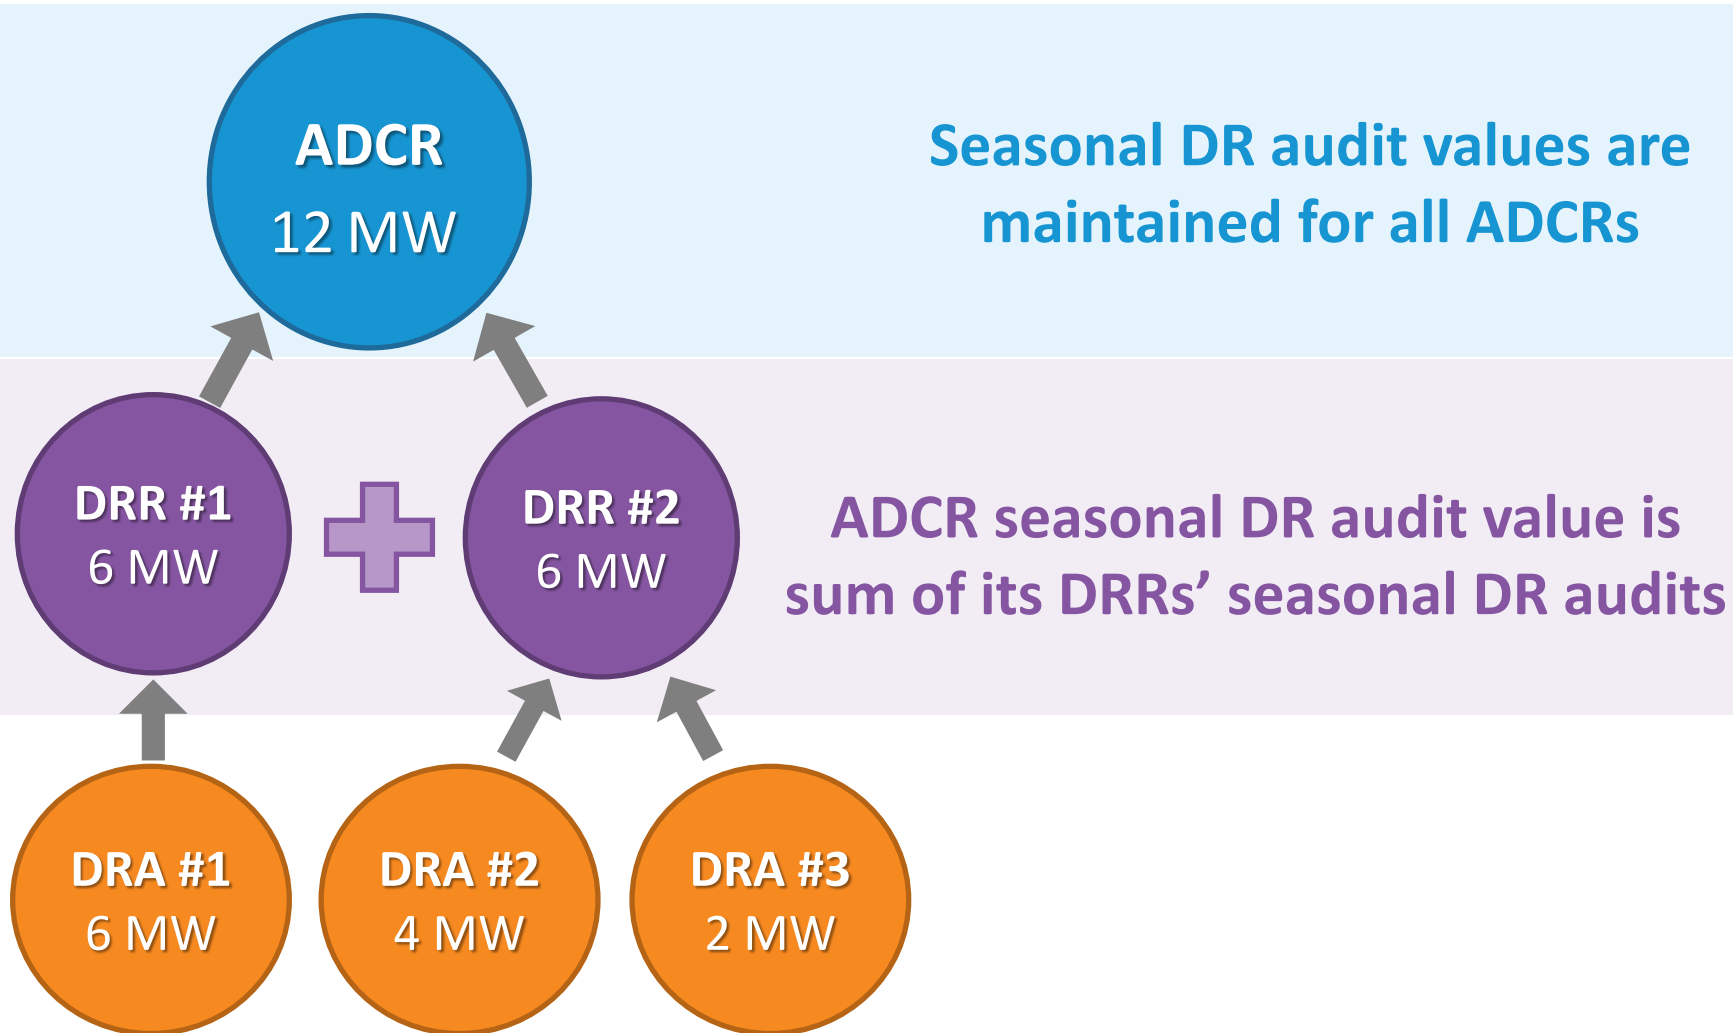

- Dispatch instruction will order DRR to its offered max reduction
- Audit is 1 hour and will start with the first five-minute interval after sufficient time has been allowed for the resource to ramp (based on its demand reduction offer parameters)
- These audits are evaluated for NCPC compensation
  - In accordance with Market Rule 1, Appendix F - Net Commitment-Period Compensation (NCPC) Accounting

# Active Demand Capacity Resource (ADCR)

# Seasonal DR Audit Value of an ADCR

# Impacts of Audits on FCM

**As of June 1, 2018: audit results will not be used for FCM settlement**

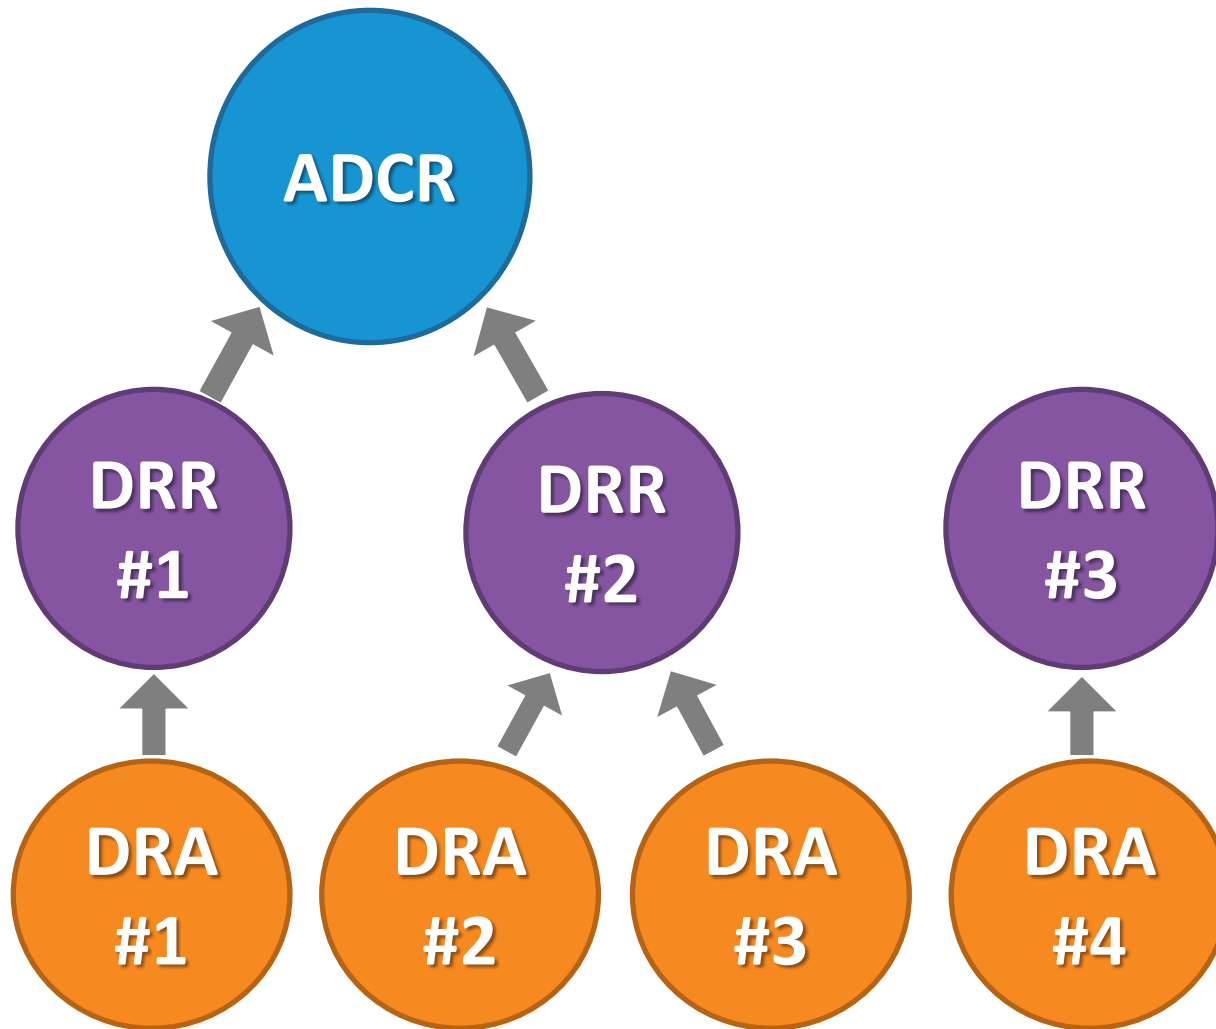

- Pay-for-performance will be in effect

**Other impacts of audit values remain and will not be covered as part of this presentation**

# Data Conversion

## *Record Seeding in ATT*

# Names and IDs – What Changes? What Stays the Same?

Existing capacity resources become ADCRs:  
same name  
same ID

New!!  
System-generated name & ID

Existing DR assets converted:  
same name  
new ID

# ATT Will be Seeded

## Audit records for audits previously performed by demand capacity resources

- Showing the asset results that were associated with it

## Summer conversion audit record to introduce the DRR

- Reflecting most recent audit results as of end of summer 2017
- Summer 2017 audits will expire August 31, 2018
  - Need to audit between June 1<sup>st</sup> and August 31<sup>st</sup> 2018

## Winter conversion audit record to introduce the DRR

- Reflecting most recent winter audit results as of end of January 2018
- Winter 2017/2018 audits will expire August 31, 2019
  - Need to audit between December 1<sup>st</sup> 2018 and end of March 31<sup>st</sup> 2019

# Seeded Audit Record

## Actual Audit

# DR Audit and Testing Tool

*Seasonal DR Audits*

# Purpose of ATT

- Submit active seasonal DRR audits and view results
- Submit claim 10/30 audit requests for active DR
  - Only for submissions - not results
  - Claim 10/claim 30 is covered later in this presentation
- Submit passive (on-peak and seasonal peak) DR audits and view results
  - Covered in March 29, 2018 webinar

# Single Sign-On (SSO) Requires a Digital Certificate

- Digital certificate is issued to your company's security administrator (SA) by ISO
- Your company's SA assigns your access
- Standard Market Design (SMD) Applications Home Page
  - <https://smd.iso-ne.com>

Don't know who your company's SA is?  
Call ISO Customer Support and we'll help you find out.

**Sandbox available on April 2, 2018**

# ATT DRR Audit Types

## Seasonal

- Request dispatch, or
- Use past dispatch

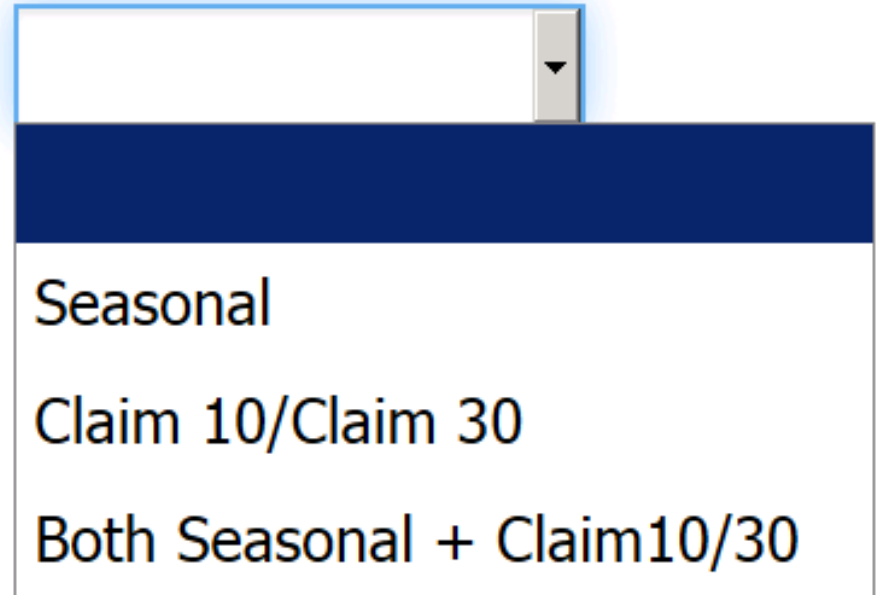

## Claim 10/Claim 30

- Request dispatch

## Both Seasonal + Claim10/30

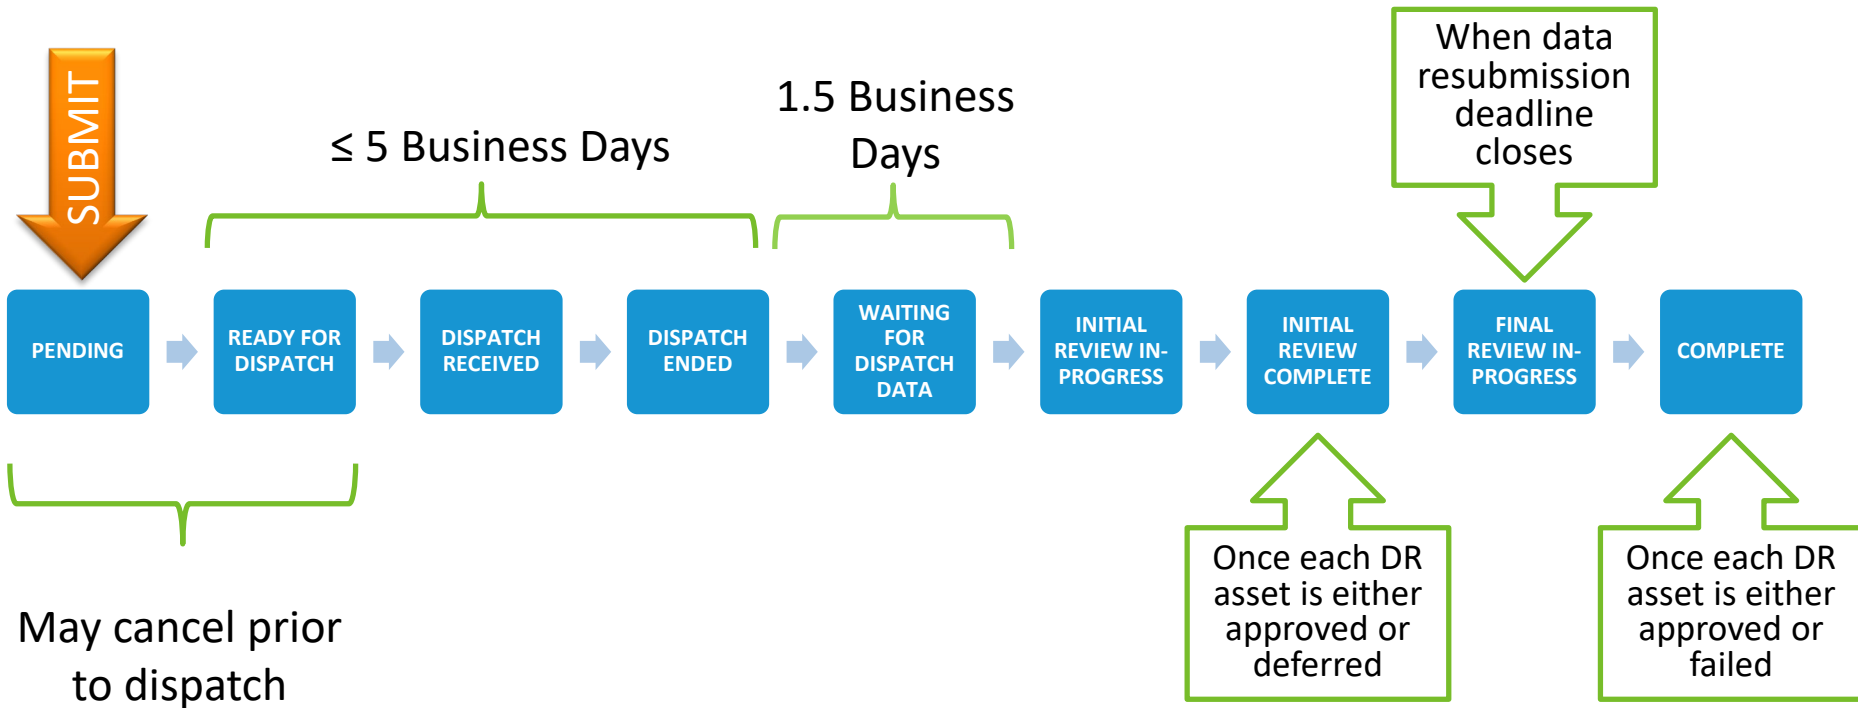

- Request dispatch

### Audit Type\*

A screenshot of a web form element. At the top, the text "Audit Type\*" is displayed in a dark font. Below it is a white rectangular input field with a small downward-pointing arrow on its right side. A dark blue horizontal bar is positioned directly below the input field. Underneath this bar, a white dropdown menu is open, listing three options: "Seasonal", "Claim 10/Claim 30", and "Both Seasonal + Claim10/30".

# Process Flow: Scheduled Seasonal Audit

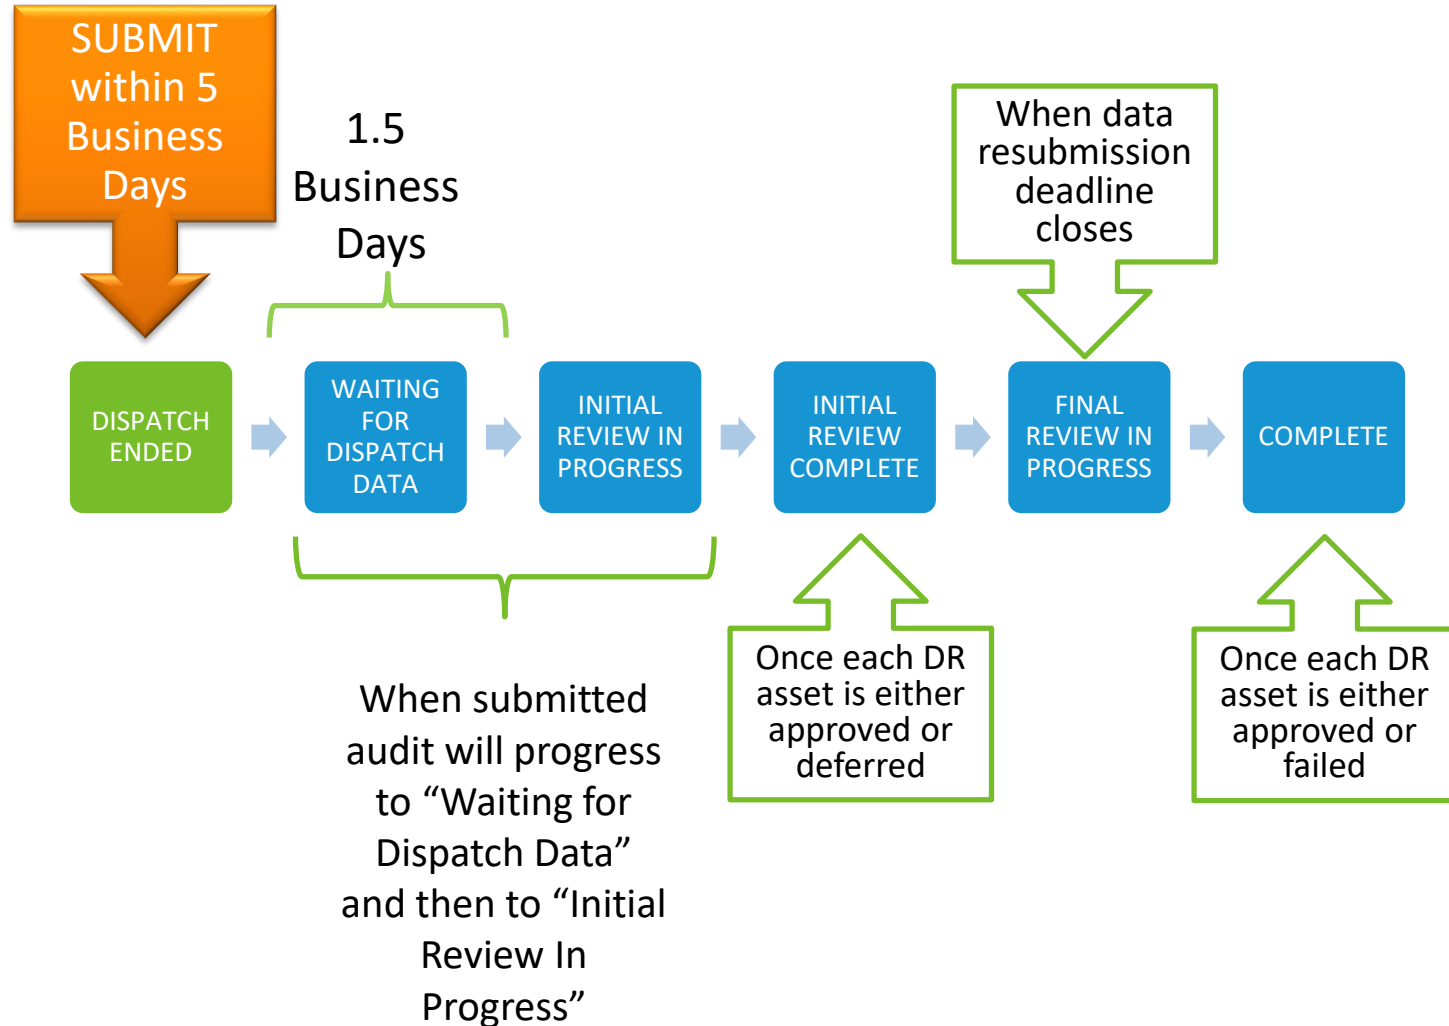

- DRR: Cannot request audits with overlapping windows unless prior audit(s) already dispatched
- If ISO ends the dispatch with less than 12 intervals completed, audit status goes to
  - **Seasonal**: cancelled
  - **Seasonal + claim 10/30**: partially completed

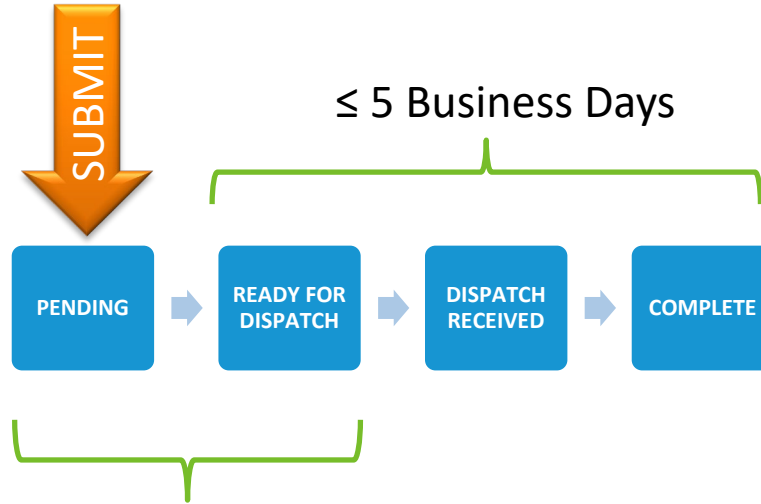

Slide updated on 9/13/2024.

# Process Flow: Using a Past Dispatch as a Seasonal Audit

# Process Flow: Claim10/Claim30 Audit

May cancel prior  
to dispatch

Slide updated on 9/13/2024.

# Auditing and Testing Tool Demonstration

# Operating Reserves

*Kory Haag*

# Reserve Definitions – 10 Minutes

**Ten Minute Spinning Reserve (TMSR)** – can be provided from DRR that is dispatched and has no controllable generation

**Ten Minute Non-Spinning Reserve (TMNSR)** – can be provided by DRR that is currently not dispatched but can be dispatched in 10 minutes or less

# Converting Reserves to Energy – Time Requirements (**TMSR** and **TMNSR**)

## Abnormal Conditions

Resources providing **TMSR** and **TMNSR** are dispatched up by the ISO in real time in response to a loss of supply

- Under NERC standard BAL-002-1 (R4.1), the ISO must ensure that the lost supply is replaced within **15 minutes** of the occurrence of the contingency
- ISO uses Ten Minute Reserve (TMR) in order to provide operators time to react to the supply loss and meet the NERC Standard

# Reserve Definitions – Thirty Minutes

**Thirty Minute Operating Reserve (TMOR)** – can be provided by dispatched or not dispatched DRR that can be dispatched within 30 minutes

# Converting Reserves to Energy – Time Requirements

## TMOR

### Abnormal Conditions

Resources providing **TMOR** are dispatched up by the ISO in real-time when the available **TMSR** and **TMNSR** is below or is expected to be below the total system TMR requirement

- Under NERC standard BAL-002-1 (R4.1), the ISO must restore its total system TMR requirement either:
  1. Within 115 minutes if the deficiency was caused by a NERC-reportable supply loss or
  2. Within 90 minutes from the time when there was insufficient resources providing the TMR product to meet the total system TMR requirement (if the deficiency was not caused by a NERC-reportable supply loss)

# Measuring DRR Performance

## *Determining Reserves*

# DRR Performance Audits

## *3-Types*

1. ISO-initiated
2. Participant requested
3. Normal dispatch

# Audit Periodicity Requirement

Once every forward reserve procurement period (FRPP)

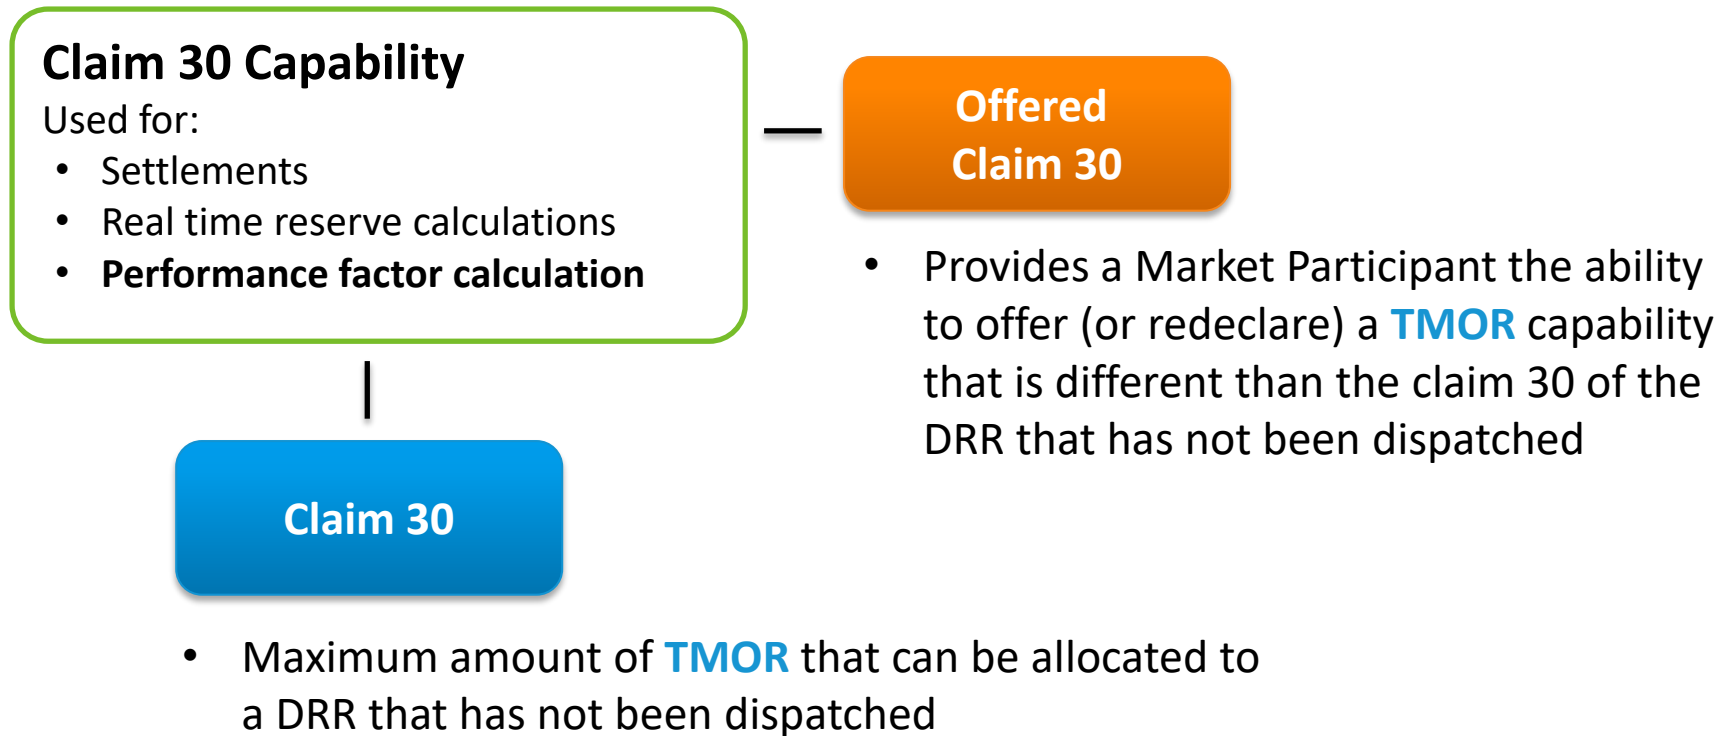

# Performance is Measured at the DRR Level

- Only uses real-time telemetry
  - No corrections are used
- DRA performance is aggregated to the DRR performance
- If a DRA is added to or removed from a DRR the claim 10/30 value is not affected
- Participant's responsibility to maintain claim 10/30 offer to reflect actual capability
- Performance factor will be affected if offers are not accurate
  - More on performance factor later in this presentation

# Claim 30 Capability

Calculated weekly, effective for the next Monday-Sunday

ISO calculates the **TMOR** capability of a DRR that has not been dispatched as the lower of the **claim 30** value or the **offered claim 30**.

# Claim 30 Value

## Claim 30 Capability

Used for:

- Settlements
- Real time reserve calculations
- **Performance factor calculation**

Offered  
Claim 30

Claim 30

=

*Maximum  
Reduction Level*

×

*Performance  
Factor*

# Claim 30 Value Upon Full Integration of PRD

## On June 1, 2018, and October 1, 2018:

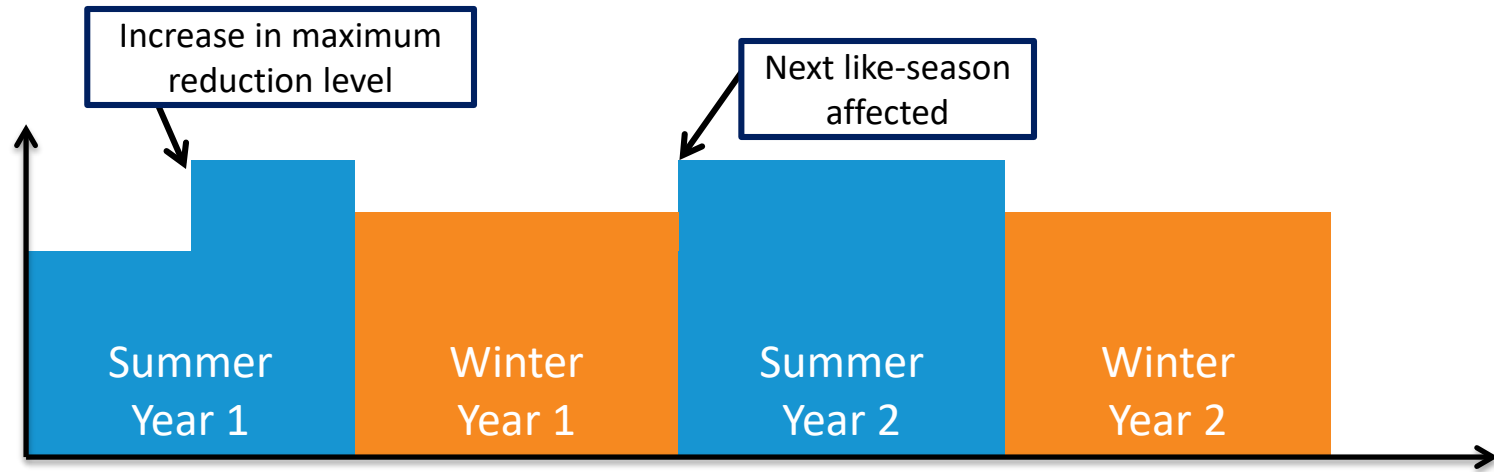

- Maximum reduction level for DRR will equal 30 minute performance for DRAs that were active in Summer 2017 and Winter 2017-2018
  - Value will be removed ~ 4 weeks after the start of each FRPP in 2018
- Performance factor will equal 1.0 until first startup dispatch

# Maximum Reduction Level

- Highest reduction a resource has reached at **30 minutes** in the current or previous like FRPP

# Maximum Reduction Level Carryover

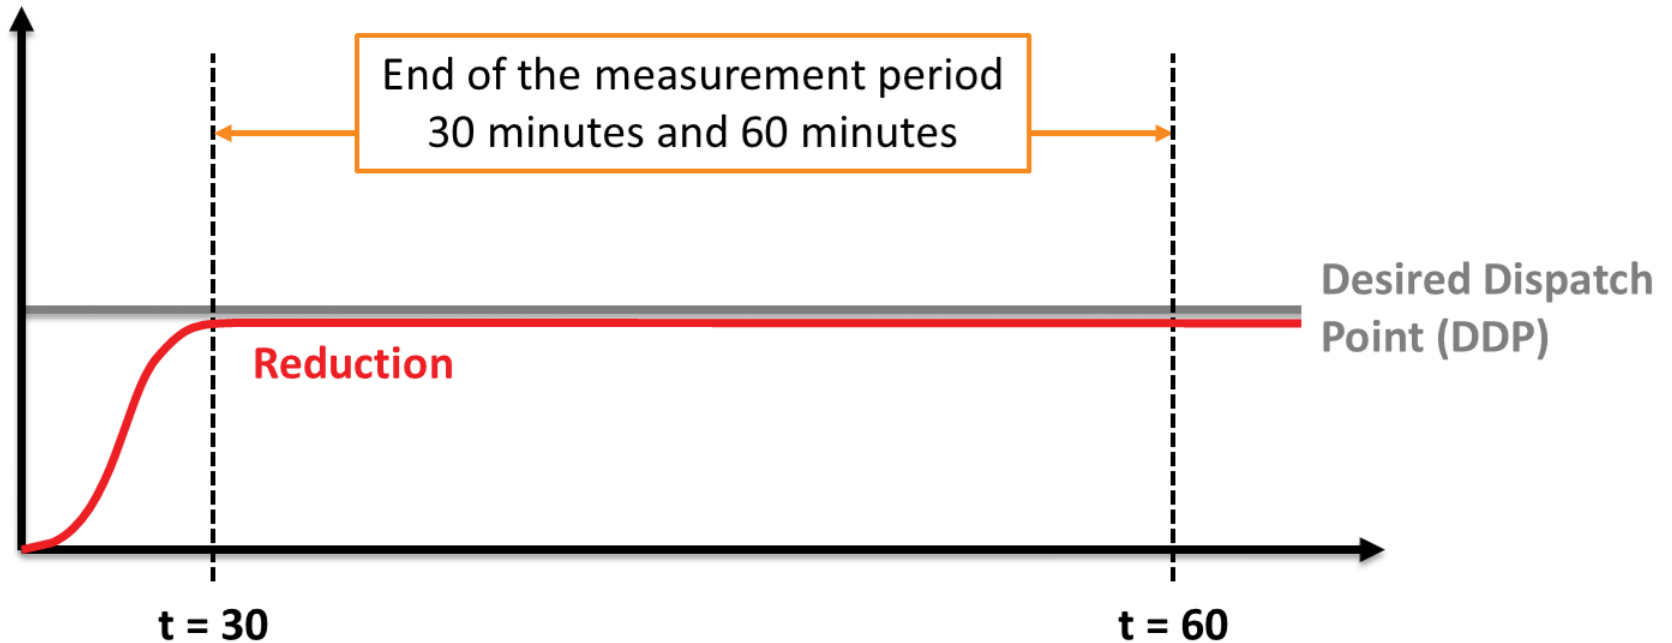

- Becomes effective from the week of the increase and going forward for the current FRPP
- Carries forward to the next like FRPP

# Measuring DRR Reduction

- Use real-time telemetry values
  - 5 minute data for TMOR
- Measure at 30 minutes from dispatch time
  - Interpolate between data points

# Increasing a Resource's Maximum Reduction Level

## Economic Dispatch

1. Normal economic dispatch
2. Reduction at 30 minutes greater than current maximum reduction level
3. The maximum reduction level is raised prospectively (limited by DDP)

## Formal Audit

1. Market participant requests an audit
2. Requested DDP is sent on unannounced dispatch
3. Reduction at 30 minutes is greater than current maximum reduction level
4. The maximum reduction level is raised prospectively

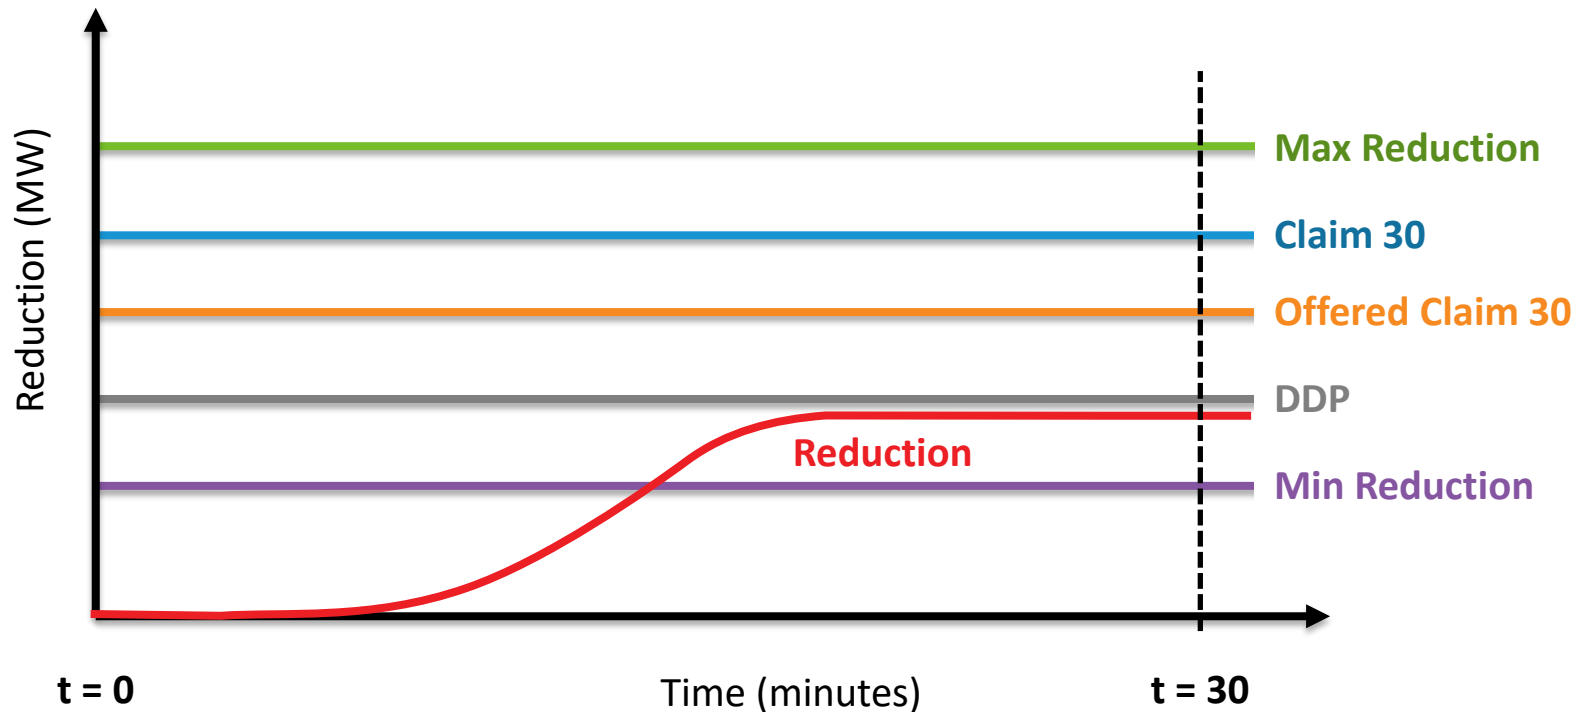

# Performance Factor Overview

- A **performance factor** allows ISO to model a resource's historical ability to achieve **target value** from a not dispatched state
- Calculated for each resource based on the performance in its previous **ten** startups (limited by 3 years)
- Uses weighted average calculation

# Performance Factor and Target Value

Each time a fast-start DRR is dispatched from a not dispatched state its performance is evaluated based upon its reduction at 30 minutes, in relation to its target value.

# Target Value

- Minimum expected reduction the resource should meet at 30 minutes based upon offered parameters
- Compared to actual resource reduction at 30 minutes to determine whether the resource met expectations
- Directly affected by participant supply offer parameters:
  - DDP (dependent upon startup time, notification time, response rate)
  - Claim 30 capability
  - Maximum reduction / minimum reduction

# Determining the Target Value

Target Value is the  
minimum of these values

Find the **minimum** of  
these two numbers

Find the **maximum** of  
these two numbers

Claim 30	Offered Claim 30	Desired Dispatch Point (DDP)	Min Reduction
48	50	60	30

Next Start:

48

50

60

30

The **minimum**  
value is 48 MW

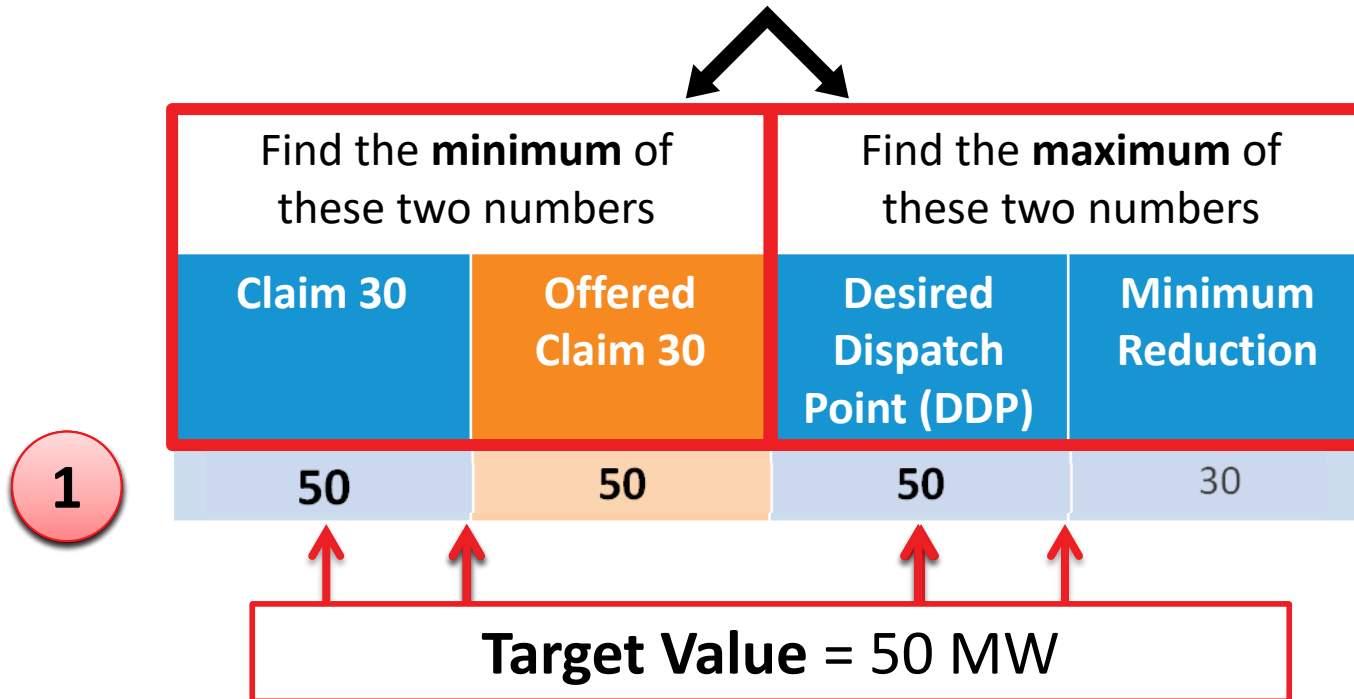

The **Target Value**  
is 48 MW

The **maximum**  
value is 60 MW

# Target Value Scenarios

The **Target Value** is compared to actual resource reduction to calculate the performance factor.

The **Target Value** is the **minimum** of these values

# Calculating Performance Factor

## *Finding the Dispatch Performance*

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value										
Actual Output										
Dispatch Performance <i>(Actual Output / Target Output)</i>										
Weighted Dispatch Performance <i>(Dispatch Performance x Weighting Factor)</i>										

**Dispatch Performance** is limited to 1.0

$$\text{Performance Factor} = \frac{\sum_{n=1}^{10} \left( \frac{\text{Actual Reduction at 30 minutes}}{\text{Target Value}} * n \right)}{\sum_{n=1}^{10} n}$$

# Calculating Performance Factor

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value										
Actual Output										
Dispatch Performance <i>(Actual Output / Target Output)</i>										
Weighted Dispatch Performance <i>(Dispatch Performance x Weighting Factor)</i>	Add these numbers together									

Sum of weighted dispatch performance.

Performance Factor =

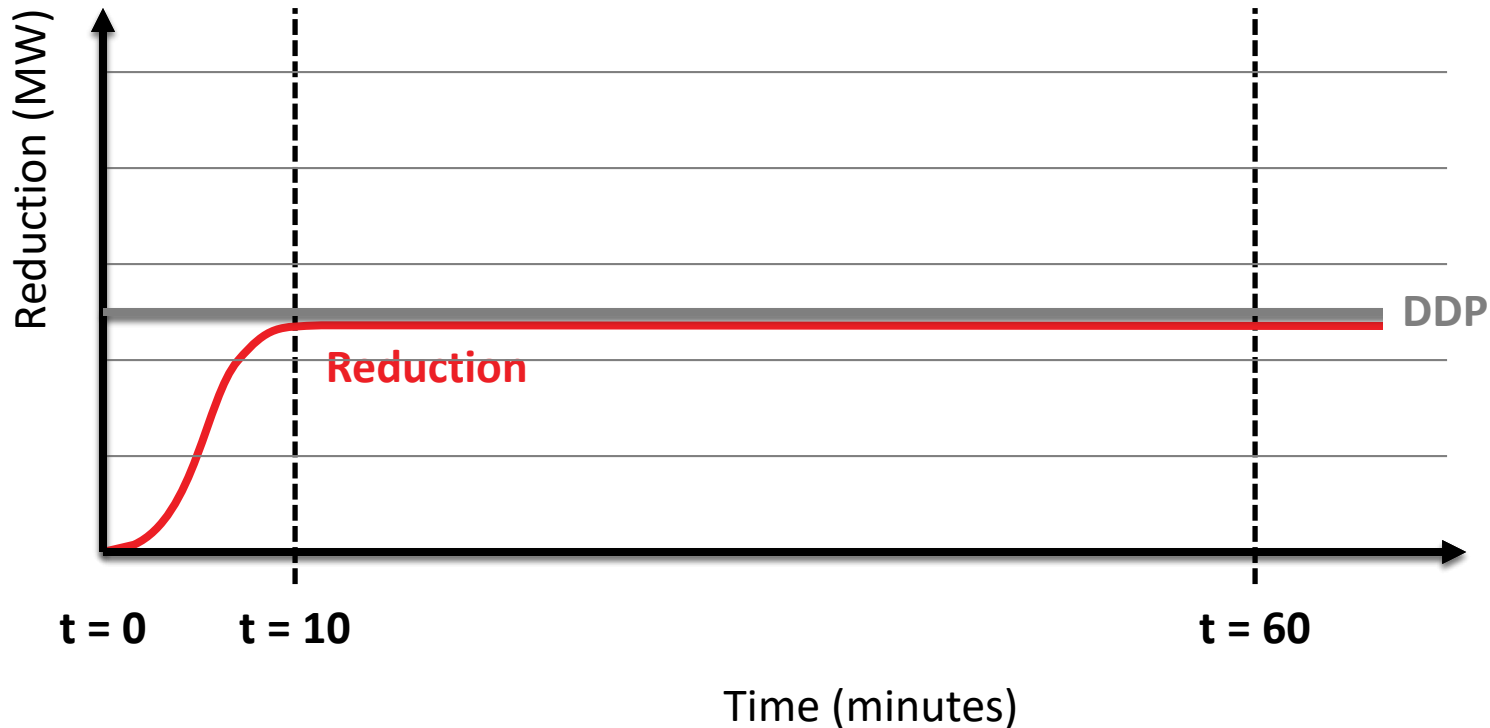

$$\sum_{n=1}^{10} \left( \frac{\text{Actual Output at 10 minutes}}{\text{Target Value}} * n \right)$$

Sum of weighting factor

$$\sum_{n=1}^{10} n$$

# DRR Sustainability Caveat

- DRR must remain in service for **60 minutes** following the initial dispatch
  - Unit control mode (UCM) of 2 or higher
- Does not require the DRR to be dispatched for 60 minutes.
  - May have a minimum reduction time of less than 60 minutes

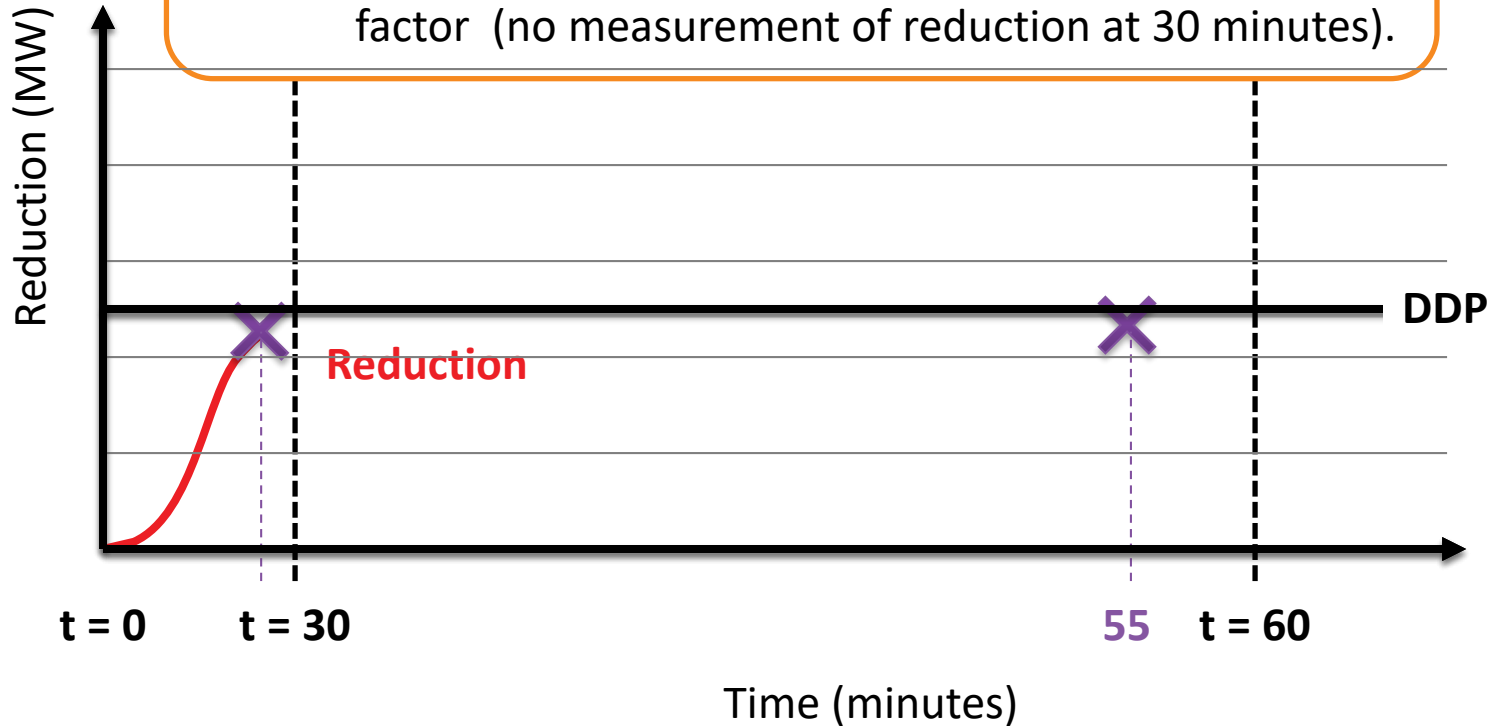

# DRR Sustainability

1. DRR meets target at 30 minutes
2. DRR goes out of service at 55 minutes after the dispatch

- DRR is not dispatched for 30 minutes
- DRR is still available

**Result:** The **start** will not count towards the performance factor (no measurement of reduction at 30 minutes).

# Questions?

$$\text{Claim 30} = \text{Maximum Reduction Level} \times \text{Performance Factor}$$

## Next:

- *Examples of calculating performance factor*
- *Specific scenarios which affect claim 30*

# Performance Factor Example 1

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48	48	48	48	48	48	48	48
Actual Reduction	48	48	48	48	48	48	48	48	48	48
Dispatch Performance ( <i>Actual Reduction / Target Reduction</i> )	1	1	1	1	1	1	1	1	1	1
Weighted Dispatch Performance ( <i>Dispatch Performance x Weighting Factor</i> )	10	9	8	7	6	5	4	3	2	1

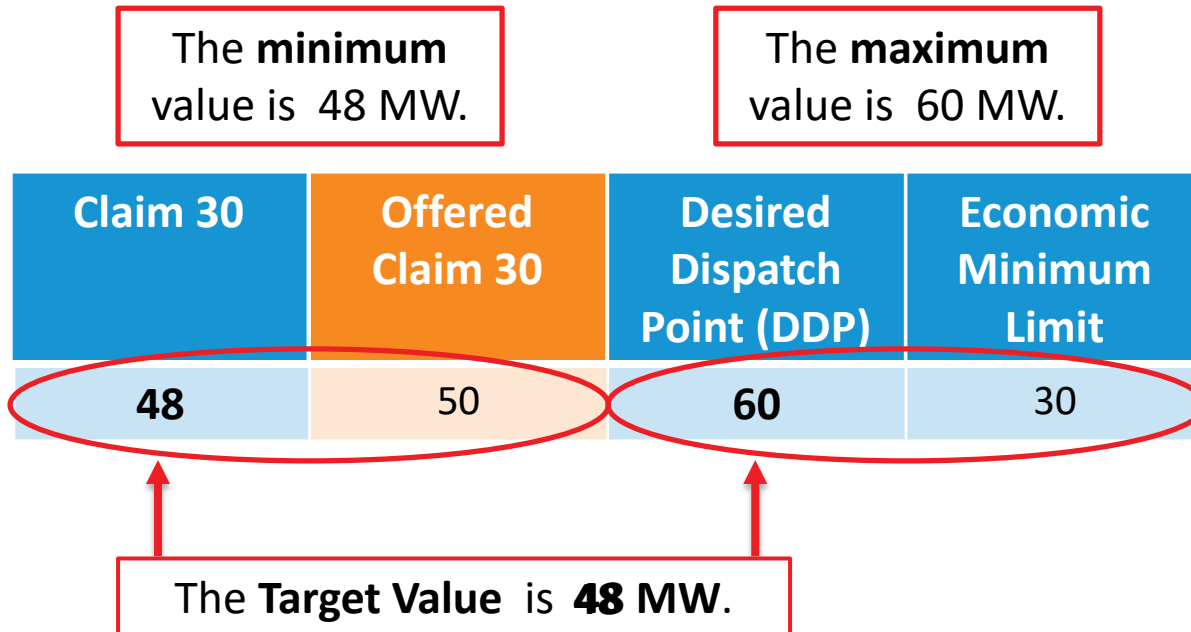

- DRR has a starting performance factor = 1.0
  - 10 starts in last 3 years
  - DRR reached target value during each start
- DRR receives a startup DDP

# Example 1

## Step 1. Find the Target Value

### Results from the most recent start:

DDP	60
Target Value	48
Actual Reduction	40
Dispatch Performance (Actual Reduction ÷ Target Reduction)	40/48
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	8.3

# Example 1

Step 2. Calculate Performance Factor

Results from the most recent start:

DDP	48
Target Value	40
Actual Reduction	
Dispatch Performance (Actual Reduction ÷ Target Reduction)	40/48
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	8.3

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48	48	48	48	48	48	48	
Actual Reduction	48	48	48	48	48	48	48	48	48	
Dispatch Performance (Actual Reduction ÷ Target Reduction)	1	1	1	1	1	1	1	1	1	
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)		9	8	7	6	5	4	3	2	1

↑  
This becomes the most recent start

↑  
This gets removed

# Example 1

Step 2. Calculate Performance Factor

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48	48	48	48	48	48	48	48
Actual Output	40	48	48	48	48	48	48	48	48	48
Dispatch Performance (Actual Output / Target Output)	40/48	1	1	1	1	1	1	1	1	1
Weighted Dispatch Performance (Dispatch Performance x Weighting Factor)	8.3	9	8	7	6	5	4	3	2	1

$$\text{Performance Factor} = \frac{8.3 + 9 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1}{10 + 9 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1} = \frac{55}{55} = 1$$

# Performance Factor Example 2

- Using the same target value as the previous example
- Assume that same DRR has had only 3 previous starts in last 3 years and each one the resource has reached target value
  - Starting Performance Factor is 1.0
- DRR receives startup DDP

## Results from the most recent start:

DDP	60
Target Value	48
Actual Reduction	40
Dispatch Performance (Actual Reduction ÷ Target Reduction)	40/48
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	8.3

# Example 2

Calculate Performance Factor

Results from the most recent start:

DDP	60
Target Value	48
Actual Reduction	40
Dispatch Performance (Actual Reduction ÷ Target Reduction)	40/48
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	8.3

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48							
Actual Reduction	48	48	48							
Dispatch Performance (Actual Reduction ÷ Target Reduction)	1	1	1							
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	10	9	8	7						

↑ ↑  
 becomes the most recent start

# Example 2

Calculate Performance Factor

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48	48						
Actual Output	40	48	48	48						
Dispatch Performance (Actual Output / Target Output)	40/48	1	1	1						
Weighted Dispatch Performance (Dispatch Pe	8.3	9	8	7						

$$\text{Performance Factor} = \frac{8.3 + 9 + 8 + 7}{10 + 9 + 8 + 7} = 0.95$$

# Specific Scenarios Which Affect Claim 30

- How a resource can increase their maximum reduction level and claim 30
- How a resource can control the amount of reserves it offers to ensure that it can achieve its target value
- How a resource that underperforms gets a reduced claim 30
- How a resource that meets its target value increases its claim 30

# Increasing Claim 30

**WEEK 1:**

**Min Reduction / DDP = 60 MW**

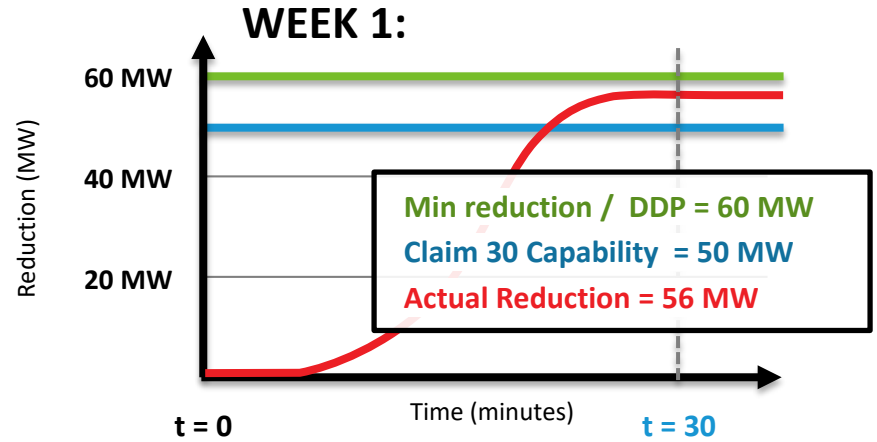

**Claim 30 Capability = 50 MW**

**Actual Reduction = 56 MW**

# Increasing Claim 30

Increasing the maximum reduction level will increase the Claim 30 of a resource.

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56

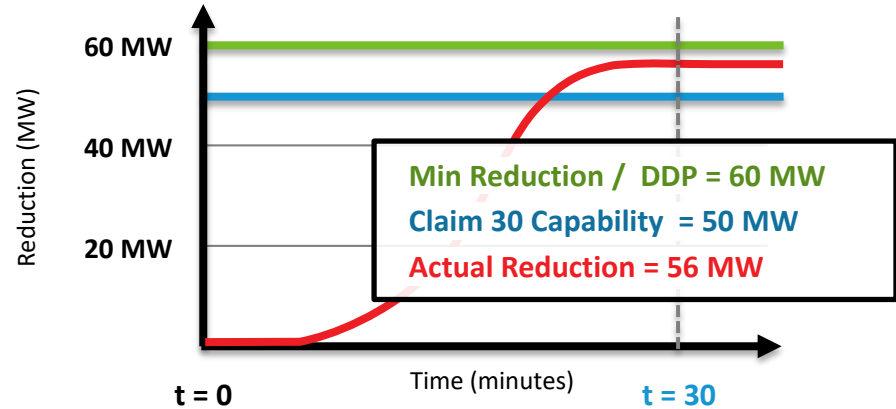

3	56	1.0	56	20				
4	56	0.909	50.9					

ISO honors minimum reduction constraint and sends a DDP of **60 MW**

Resource produces **56 MW** at 30 minutes

# Increasing Claim 30

Assuming no additional dispatches in Week 1, the maximum reduction level in Week 2 will increase to 56 MW since it demonstrated the ability to reach 56 MW.

Week	Maximum Output Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56

3	50						20	10
4	56							

The resource performed up to its target value, so the **performance factor** remains at **1.0**.

# 1. How Maximum Reduction Affects Claim 30

$$\begin{aligned} \text{Claim 30} &= \text{Maximum Reduction Level} \times \text{Performance Factor} \\ &= 56 \text{ MW} \times 1.0 \\ &= 56 \text{ MW} \end{aligned}$$

Week	Maximum reduction level	Performance factor	Claim 30 value	Offered Claim 30	Minimum Reduction	DDP	Target value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	56	1.0						

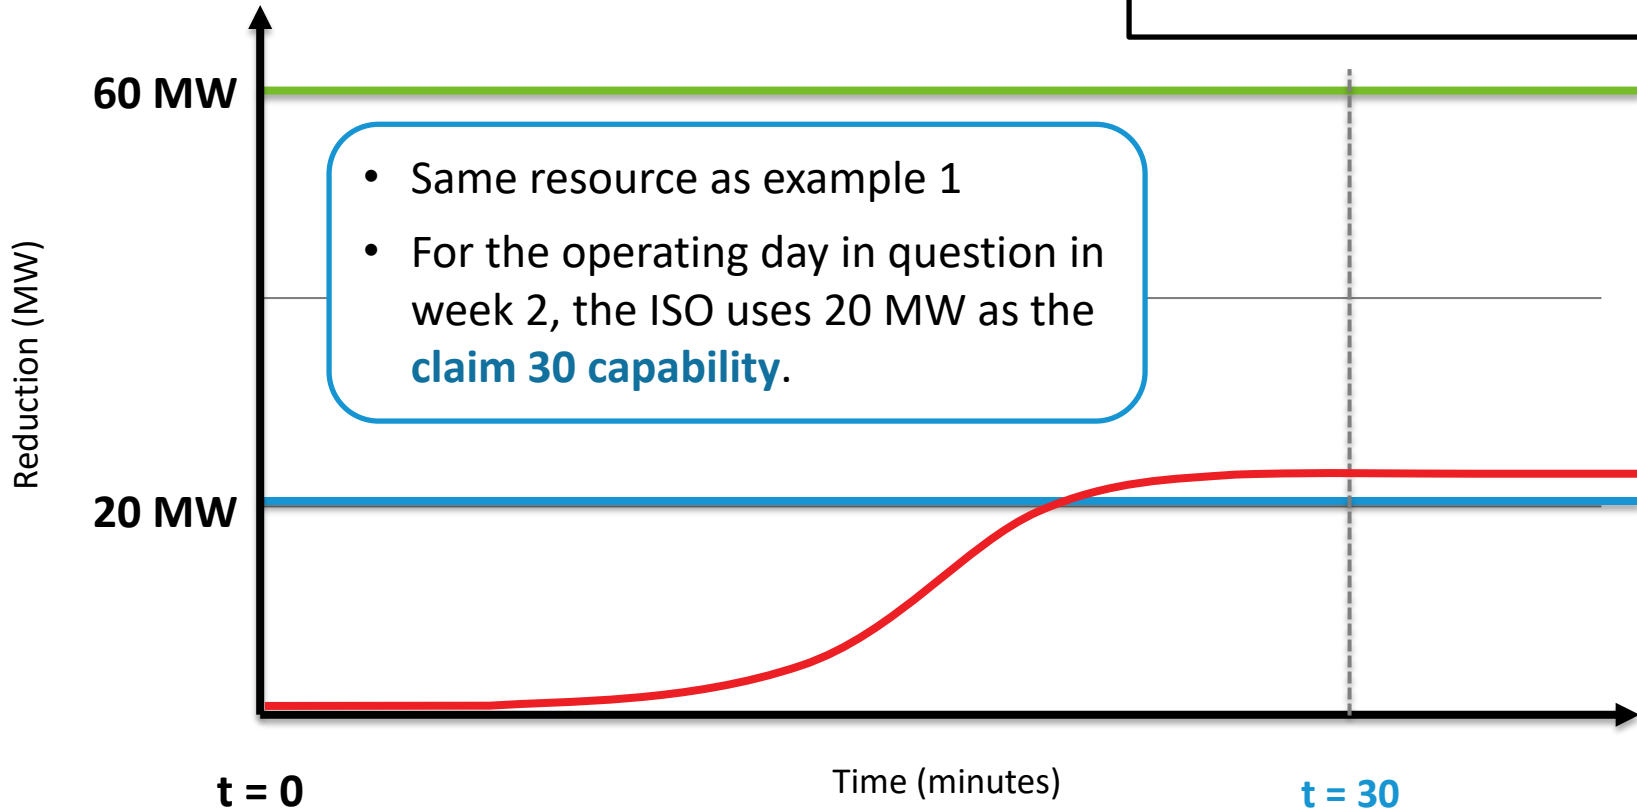

## 2. Achieve Target Value by Controlling Reserves

**WEEK 2:**

**Min Reduction / DDP = 60 MW**

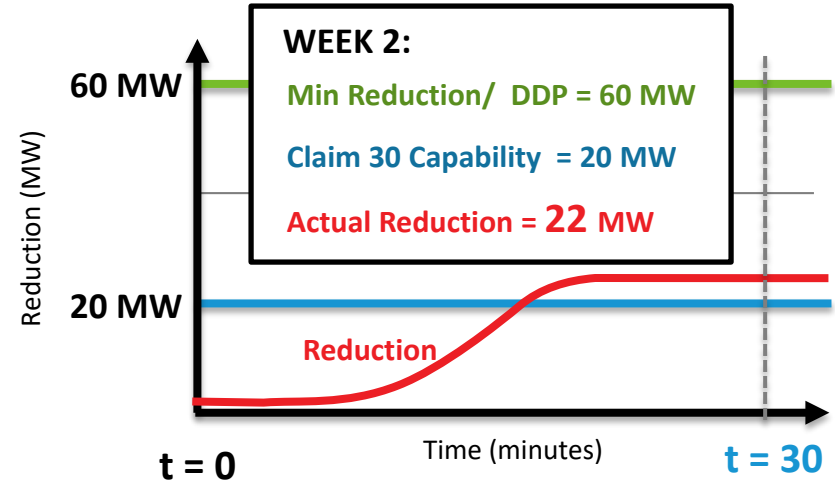

**Claim 30 Capability = 20 MW**

**Actual Reduction = 22 MW**

## 2. Achieve Target Value by Controlling Reserves

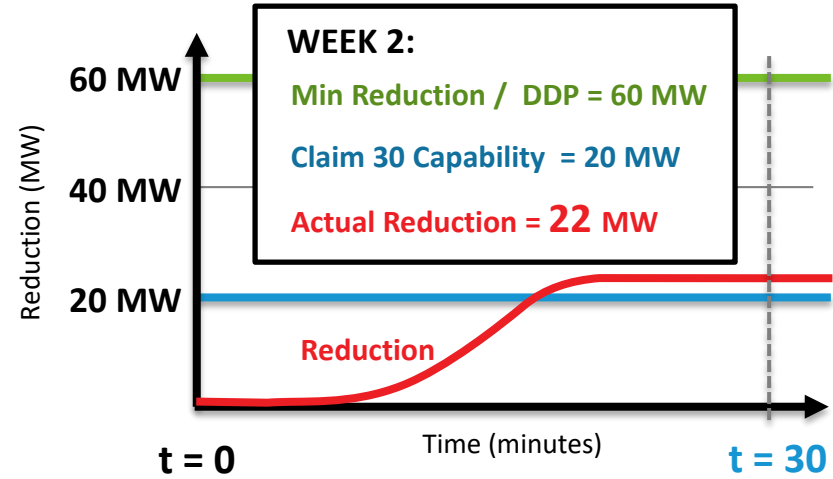

If the minimum reduction of the resource continues to be 60 MW, ISO will send a DDP of 60MW.

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	<b>56</b>	<b>1.0</b>	<b>56</b>	<b>20</b>				

## 2. Achieve Target Value by Controlling Reserves

The resource reached the Target Value in 30 minutes, so Week 3 performance factor remains at 1.0 and the claim 30 remains at 56 MW.

ISO dispatches a resource from a not dispatched state with these assumptions:

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	56	1.0	56	20	60	60	<b>20</b>	<b>22</b>
3	56	1.0	56					

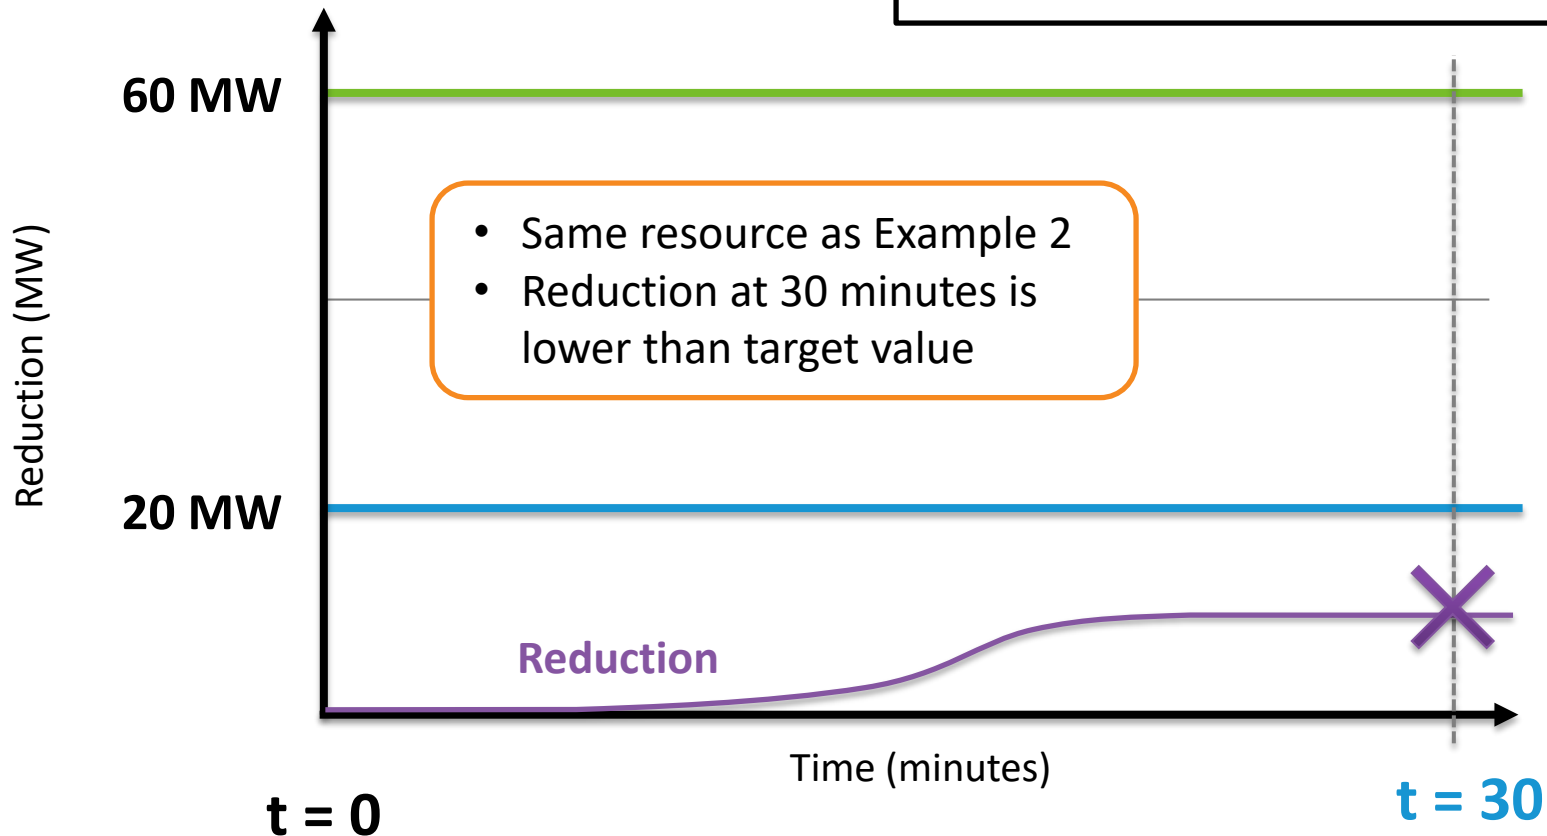

### 3. Effect on Claim 30 When a Resource Does Not Reach Target Value

**WEEK 3:**

Min Reduction / DDP = 60 MW

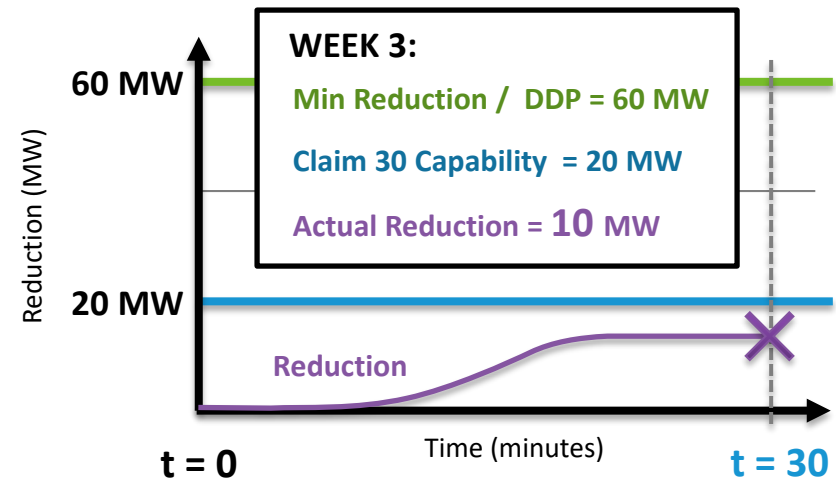

Claim 30 Capability = 20 MW

Actual Reduction = 10 MW

### 3. Effect on Claim 30 When a Resource Does Not Reach Target Value

A Market Participant offers a claim 30 of 20 MW for the resource from Example 2, but the resource does not meet its target value.

ISO dispatches a resource from a not dispatched state with these assumptions:

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	56	1.0	56	20	60	60	20	22
3	56	1.0	56	20	60	60	<b>20</b>	<b>10</b>

### 3. Effect on Claim 30 When Resource Does Not Reach Target Value

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	20	50	50	50	50	50	50	50	50	
Actual Reduction	22	56	50	50	50	50	50	50	50	
Dispatch Performance <i>(Actual Reduction / Target Reduction)</i>	1	1	1	1	1	1	1	1	1	
Weighted Dispatch Performance <i>(Dispatch Performance x Weighting Factor)</i>	10	9	8	7	6	5	4	3	2	1

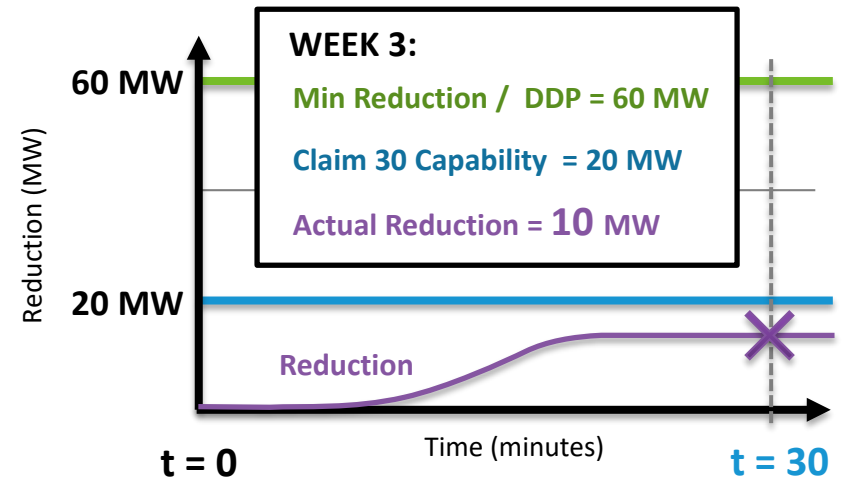

This becomes the most recent start

This gets removed

$$\text{Performance Factor} = \frac{10 + 9 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1}{10 + 9 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1} = 0.909$$

### 3. Effect on Claim 30 When a Resource Does Not Reach Target Value

When performance factor decreases in Week 3, it causes the Claim 30 to decrease in Week 4.

ISO dispatches a resource from a not dispatched state with these assumptions:

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct
1	50	1.0	50	50	60	60	50	56
2	56	1.0	56	20	60	60	20	22
3	56	1.0	56	20	60	60	20	10
4	56	0.909	50.9					

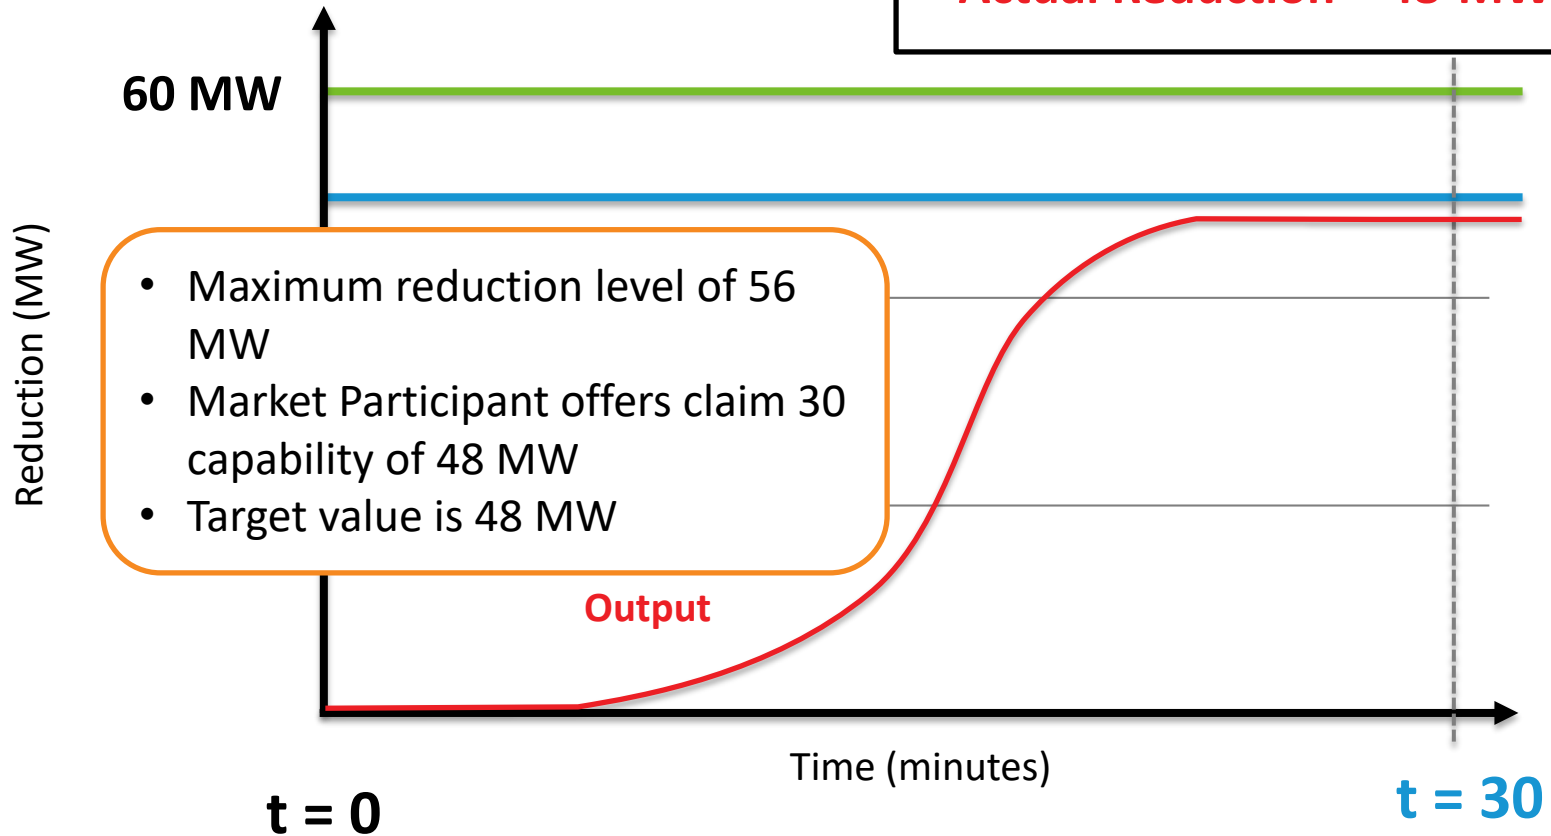

# Actual Reduction $\geq$ Target Value

**WEEK 4:**

Min Reduction / DDP = 60 MW

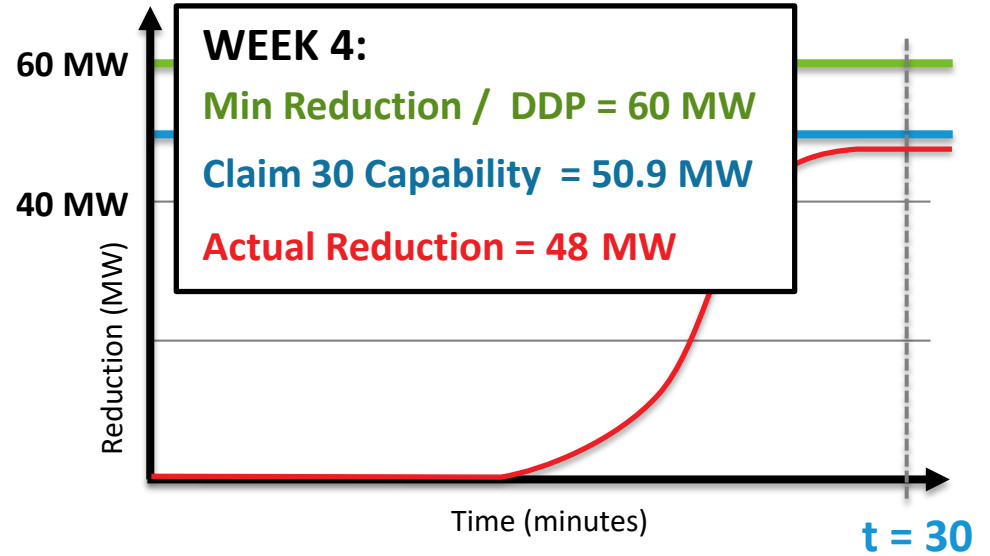

Claim 30 Capability = 50.9 MW

Actual Reduction = 48 MW

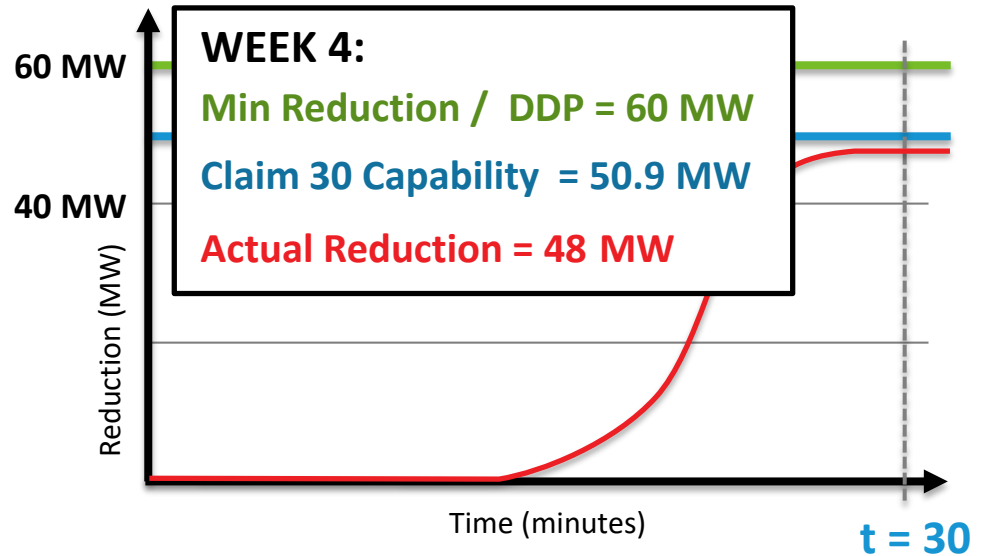

# 4. Actual Reduction $\geq$ Target value

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	56	1.0	56	20	60	60	20	22
3	56	1.0	56	20	60	60	20	10
4	56	0.909	50.9					

# 4. Actual Reduction $\geq$ Target Value

- Performance factor will increase because, for this dispatch, a value of 1 will be utilized in calculating the performance factor.
- Claim 30 will increase because the performance factor increased.

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
1	50	1.0	50	50	60	60	50	56
2	56	1.0	56	20	60	60	20	22
3	56	1.0	56	20	60	60	20	10
4	56	0.909	50.9	<b>48</b>	60	60	<b>48</b>	<b>48</b>
5	<b>56</b>							

# Example 4: Actual Reduction ≥ Target Value

Weighting Factor / Start Number	10	9	8	7	6	5	4	3	2	1
DDP	60	60	60	60	60	60	60	60	60	60
Target Value	48	20	20	50	50	50	50	50	50	50
Actual Reduction	48	10	22	56	50	50	50	50	50	50
Dispatch Performance <i>(Actual Reduction / Target Reduction)</i>	48/48	.5	1	1	1	1	1	1	1	1
Weighted Dispatch Performance <i>(Dispatch Performance x Weighting Factor)</i>	10	4.5	8	7	6	5	4	3	2	1

$$\text{Performance Factor} = \frac{10 + 4.5 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1}{10 + 9 + 8 + 7 + 6 + 5 + 4 + 3 + 2 + 1} = 0.918$$

# Example 4: Actual Reduction $\geq$ Target value (cont.)

$$\begin{aligned} \text{Claim 30} &= \text{Maximum Reduction Level} \times \text{Performance Factor} \\ 56 \text{ MW} &\times .918 \\ &= 51.4 \text{ MW} \end{aligned}$$

Week	Maximum Reduction Level	Performance Factor	Claim 30	Offered Claim 30	Minimum Reduction	DDP	Target Value	Actual Reduct.
...								
4	56	0.909	50.9	48	60	60	48	48
5	<b>56</b>	<b>0.918</b>	<b>51.4</b>					

# Questions?

## Next:

- *Performance factor cure*
- *Reports*

# Performance Factor Cure

- May be requested if unit has:
  - Chronic problem that meets criteria in Market Rule
  - Major overhaul
- Submit plan to ISO
- Perform maintenance
- Perform audit
- Following audit:
  - All prior history is removed
  - Performance factor set to 1

# Questions?

# Customer Support Information

## Ask ISO (preferred)

- Self-service interface for submitting inquiries
- Accessible through the SMD Applications Homepage
- Requires a valid digital certificate with the role of Ask ISO/External User (Contact your security administrator for assistance)

### Other Methods of Contacting Customer Support

Method	Contact Information	Availability
Email	<a href="mailto:custserv@iso-ne.com">custserv@iso-ne.com</a>	Anytime
Phone*	(413) 540-4220	Monday through Friday 8:00 a.m. to 5:00 p.m. (EST)
Pager (emergency inquiries)	(877) 226-4814	Outside of regular business hours

\* Recorded/monitored conversations

# Appendix

# DRA Operational Status Requirements

DRA

- It is in the Monthly Communications Model (*registration process*)
  - ‘Approved’ by ISO in CAMS
  - Telemetry is installed & operational
  - Mapped to an operational **DRR**
- It has a baseline built for the day-type (*only done once*)
- Meter issue flag is set to ‘No’ in CAMS
- Has no scheduled curtailments in CAMS for the operating day

If any of these criteria are not met the **DRA**'s status is **automatically non-operational** and it **will not** contribute to **DRR** reduction values

# Important Note

Screenshots are from a testing environment

Appearance on June 1, 2018 may be very slightly different than the screenshots shown here.

Scenarios were built for training purposes and may not reflect how things will look in production

# Example 1

Step 2. Calculate Performance Factor

Results from most recent start:

DDP	48
Target Value	40
Actual Reduction	
Dispatch Performance (Actual Reduction ÷ Target Reduction)	40/48
Weighted Dispatch Performance (Dispatch Performance × Weighting Factor)	8.3

Weighing Factor / Start Number	10	9	8	7	6	5	4	3	2	1
Target Value	48	48	48	48	48	48	48	48	48	
Actual Output	48	48	48	48	48	48	48	48	48	
Dispatch Performance (Actual Output / Target Output)	1	1	1	1	1	1	1	1	1	
Weighted Dispatch Performance (Dispatch Performance × Weighing Factor)		9	8	7	6	5	4	3	2	1
